## Schedule 6 Planning scheme policies (PSP) <sup>1</sup>

### SC6.3 PSP No. 3 – Engineering Standards – Water and Waste Water Infrastructure<sup>2</sup>

#### SC6.3.1 Introduction

- (1) Short Title -The planning scheme policy may be cited as PSP No 3. – Engineering Standards – Water and Waster Water Infrastructure.
- (2) Commencement - The planning scheme policy commences on 1 July 2012.

#### SC6.3.1.1 Purpose of the Planning Scheme Policy

- (1) The purpose of this planning scheme policy is to guide development affecting new and existing water and waste water infrastructure across the Toowoomba Regional Council planning scheme area. including to ensure that:
  - (a) Development near Sewerage, Water supply and Stormwater drainage and associated infrastructure does not:
    - (i) Adversely impact the function of the service;
    - (ii) Place an additional load on the service; or
    - (iii) Unduly increase future maintenance costs.and
  - (b) Adequate access is provided to all Sewerage, Water supply and Stormwater drainage and associated infrastructure for future maintenance.<sup>3</sup>

#### SC6.3.1.2 Authorised Legislation

- (1) The planning scheme policy is made under Chapter 3, Part 4, Division 2, and Chapter 3, Part 5 of the *Sustainable Planning Act 2009* (the Act).

#### SC6.3.1.3 Relationship to the Planning Scheme

- (1) This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Toowoomba Regional Planning Scheme 2012.

#### SC6.3.1.4 Definitions

- (1) Terms used in this planning scheme policy are defined in Schedule 1 - Definitions.

#### SC6.3.1.5 Interpretation of the planning scheme policy

- (1) A term used in the planning scheme policy which is not defined in Schedule 1 - Definitions, or in SC6.3.2.3 of this planning scheme policy, is to be interpreted in accordance with Part 1.3 of the Toowoomba Regional Planning Scheme 2012.

<sup>1</sup> Amended on 4 August 2014

<sup>2</sup> Amended on 7 October 2016

<sup>3</sup> Amended on 27 April 2018

## SC6.3.2 Water Infrastructure Policy

### SC6.3.2.1 Purpose

- (1) This policy provides a framework to guide development affecting new and existing water infrastructure across Toowoomba Regional Council.

### SC6.3.2.2 Scope

- (1) The scope of this policy is limited to:
  - (a) Water applications
  - (b) Water connections
  - (c) Water extensions
  - (d) Water disconnections
  - (e) Water metering
  - (f) Design of water reticulations system
  - (g) Construction of water reticulations system
  - (h) Easements
  - (i) Maintenance
  - (j) Fire Services

### SC6.3.2.3 Definitions

- (1) Council – Toowoomba Regional Council
- (2) Standard Water Services – either a DN20 (25mm OD) or a DN25 (32mm OD) metered service provided at the prescribed fee in the Fees and Charges

### SC6.3.2.4 Content

#### SC6.3.2.4.1 Water Applications

- (1) All applications are to be made in accordance with the *Plumbing and Drainage Act 2002*. Such an approval under this Act is deemed an approval under the *Water Supply (Safety and Reliability) Act 2008*.
- (2) All works involving building over or near Council infrastructure must comply with the Department of Housing and Public Works, Queensland Development Code (QDC) Mandatory Policy 1.4.
- (3) All works on existing infrastructure in relation to connections, relocation, renewal, maintenance and/or repair must be by TRC or as approved by TRC.

#### SC6.3.2.4.2 Water Connections

- (1) TRC will provide a DN25 or DN32 OD (outside diameter) service to serviced allotments, however requests for larger meters will be considered by TRC upon written request. The applicant is responsible for all costs in accordance with Toowoomba Regional Council's Fees and Charges.
- (2) Strata / group titles  
Existing lots will only be given one service (DN25 OD) unless special application is made to Council for a larger service and / or additional meters. Further, all new strata title dwellings are to be separately metered as specified in SC6.3.2.4.5 of this policy.
- (3) Amalgamated lots  
Only one service (DN25 or DN32 OD) will be connected for amalgamated lot unless special application is made to TRC for a larger service. Any additional services shall be disconnected.  
Allotments adjacent to serviced allotments may only be connected, following written application to and approval by TRC, and will be subject to any conditions and costs as determined by TRC.

- (4) Connections to existing trunk main infrastructure will require special approval from TRC.

#### **SC6.3.2.4.3 Water Extensions**

- (1) TRC will only allow the extension of polyethylene service lines if the allotment to be serviced is within 20 m of a fire hydrant or the end of a reticulation water main. If the aforementioned criteria cannot be achieved, the applicant is to pay for the extension of the existing water main (minimum DN100 diameter) which includes all necessary associated infrastructures.
- (2) It will be at the discretion of Manager Water Infrastructure Services or delegate to give approval where:
  - (a) The construction of the extension might result in reticulation or treatment problems.
  - (b) The size of any extension is over DN150 diameter or the proposal may be in conflict with Council's planning for the area, except where the extension is a requirement of a Subdivision Approval, or any other approval issued as a result of a TRC resolution.
- (3) TRC may consider making a contribution towards work based on the following:
  - (a) A contribution of up to three times the estimated additional annual income from water charges which would be levied on additional allotments serviced, but not exceeding 50% of the estimated cost of the extension.
  - (b) In the event of Council requiring a main greater than DN150 nominal diameter, Council may contribute an additional amount not exceeding the difference in material costs between the size of the main installed and a DN150 diameter main.
  - (c) Council will not make any contribution unless it is satisfied that the extension will serve a dwelling or dwellings which are either existing or under construction.

#### **SC6.3.2.4.4 Water Disconnections**

- (1) Applications must comply with SC6.3.2.4.1.
- (2) Existing water services are to be maintained to all allotments which have a building structure on them, for fire protection and general use for cleaning and personal hygiene. Accordingly, no request to disconnect such water services will be approved.
- (3) Existing water services to vacant allotments may be disconnected upon application by the owner and payment of the disconnection fee as per TRC's Fees and Charges.

#### **SC6.3.2.4.5 Metering of individual units and commercial premises for new developments**

- (1) A primary meter is to be installed external to the common boundary of all properties. In addition to the primary meters, Council is to supply and maintain secondary meters to individual units and commercial premises. The applicant is responsible for all costs in accordance with Toowoomba Regional Council's Fees and Charges.
- (2) Common properties in strata title developments must be metered separately.
- (3) All Sub-Metering installations shall be in accordance with Water Services Association of Australia, Sub-Metering Code of Practice WSA 10-2011 – and Toowoomba Regional Council Sub-Metering Guidelines and Specifications.
- (4) Individual meters are to be read by Council and accounts for water usage sent to the owners. Water consumed in the common area is to be calculated by subtracting the total reading of the sub-meters from the master meter. Based on lot apportionment, water consumed in the common areas is to be charged to individual property owners.
- (5) A written Deed of Agreement is required between TRC, property owners and the body corporate to authorise Council, its officers and authorised agents to have access to the property at all times to carry out meter reading maintenance and replacement where necessary. Where properties are secured, special access arrangements would be required.

- (6) All system installations shall be subject to TRC approval.

#### **SC6.3.2.4.6 Relocations of Service Connections**

- (1) Where proposed property crossings conflict with existing water service connections, the water service connection is to be relocated at the applicant's expense.

#### **SC6.3.2.4.7 Design of Water Reticulation**

- (1) Design of water reticulation systems shall be in accordance with the current Water Services Association of Australia (WSAA) Codes (1-5) and Toowoomba Regional Council addendum for WSA 03.

#### **SC6.3.2.4.8 Construction of Water Reticulation**

- (1) Construction of water reticulation systems shall be in accordance with the current Water Services Association of Australia (WSAA) Codes (1-5) and Toowoomba Regional Council addendum for WSA 03.

- (2) On-Maintenance Inspections and Maintenance Period

The purpose of On Maintenance Inspections is to ensure the works have been constructed in compliance with the approved plans and specifications. On Maintenance Inspections will be carried out for all new water infrastructures by Council or Council approved Contractor at Developer's cost. Works approved for 'On Maintenance' will be placed 'On Maintenance' for a period of 12 months, or as otherwise advised by Council, from the date of formal notification by Council.

During this period, responsibility and liability for rectification of defects and for any damage that may occur, regardless of the cause, lies with the Developer, not the Council. Steps must be taken by the developer to prevent damage occurring during the maintenance period including damage likely to be caused during onsite construction.

- (3) Council Off Maintenance Inspections

The purpose of the Off Maintenance inspections is to ensure that the constructed works have performed satisfactorily during the 'Maintenance Period'. Any further defects identified during Off Maintenance Inspections are to be rectified at the Developer's cost before works are certified as being Off Maintenance.

#### **SC6.3.2.4.9 Easements**

- (1) Water supply pipelines shall have easements created where they traverse private property.
- (2) The easement instrument must reserve the right for both Council staff and Council authorised persons and plant to enter the easement at any time without notice for the purpose of inspecting, constructing, extending, maintaining/replacing, controlling and managing the work within the easement.
- (3) All buildings or other structures shall remain clear of easements. Council approval and agreement must be obtained prior to any earthworks being undertaken within the easement.

#### **SC6.3.2.4.10 Fire Services**

- (1) New Fire Services

Applications must comply with SC6.3.2.4.1. For the installation/ design of internal fire fighting systems, the system shall be designed based on minimum standards as stated in Council Policy unless it can be demonstrated that the cost of such system is too onerous for the developer. In such cases a pressure and flow test can be used (three point test only) as a guide for such system design acknowledging that Council holds the right to modify system pressures. No single point tests are allowed.

Where new fire services are required the following conditions apply:

- (a) Fire services for internal hydrants and/or sprinkler systems where no fire hose reel off-takes are required shall be run as separate unmetered fire services.
- (b) Where only fire hose reels are required a single, metered fire service shall be provided.
- (c) Where internal hydrants and/or sprinkler systems and fire hose reels are required, a single connection shall be provided with a check valve and metered bypass located prior to the property boundary.
- (d) Diameters of fire services (including the diameter of metered bypasses for fire hose reels) shall be determined and certified for each project by an approved Certifier (i.e. as outlined in the Queensland Department of Housing and Local Government Register of Fire Systems Certifiers).
- (e) Fire hose reels shall not be sealed by Council.

(2) Existing Fire Services

Where unmetered fire services exist the following procedures apply:

- (a) Where a single fire service exists which serves hydrant points and/or a sprinkler system in addition to fire hose reels the service shall remain unmetered.
- (b) Where an existing fire service provides water only to fire hose reels, both the fire and domestic services shall be metered.

(3) Meter Reading

- (a) Water meters on fire services shall be read half yearly by Council's Water Metering Section.

(4) Water Consumption Adjustment for Fire-Fighting

Where water is consumed for fire-fighting purposes the following procedures apply:

- (a) The consumer shall contact Council's Water Metering Section within seven days of a fire to notify that fire hose reels have been used for fire-fighting.
- (b) Council's Water Metering Section shall arrange for the water meter to be read as soon as possible after being notified of such use.
- (c) No charge shall be levied for the water consumed between the last meter reading date and the meter reading after 'fire notification'.

#### SC6.3.2.4.11 Maintenance

- (1) Maintenance of all water services within a property is the responsibility of the property owner, with the exception of Council water mains within property easements.

#### SC6.3.2.4.12 Testing of Water Meters

(1) Testing Procedure

- (a) All Water Meter testing will be carried out in accordance with the Water Services Association of Australia, Compliance Testing of In-Service Water Meters Code of Practice, WSA 11 -2012.
- (b) An owner or occupier may request Council to test a water meter. A request must be made in a form approved by Council and be accompanied by the prescribed fees as per Council Fees and Charges.
- (c) Council may at any reasonable time disconnect any water meter for the purpose of testing the water meter subject to the conditions listed below. However Council will install a replacement water meter during the testing period to ensure continuous metered water supply.
- (d) Before Council changes the water meter for testing, Council will provide the occupier of the property at least 48 hours written notice of its intention to disconnect the water supply, advising of the reasons for shutting it off, and for how long it will be shut off, and re-connect the water supply by installation of an accurate water meter.
- (e) Where a person who has made a request for water meter testing is also the occupier of the property, Council may disconnect the water supply for the purpose

- of testing a water meter without giving that person at least 48 hours written notice if that person waives the notice requirement.
- (f) A water meter to be tested will be replaced by Council and the meter to be tested will be forwarded to an external accredited laboratory for accuracy testing as per prescribed standards at the applicant's expense.
- (2) Water Meter not Registering Accurately
- (a) Where Council determines pursuant to SC6.3.2.4.12 (1) that a water meter is not registering accurately, Council will refund the water meter testing fee and will install a water meter, which is registering accurately as per prescribed Standards.
- (b) Defective domestic water meters which are older than 8 years and have registered over 3000 KL reading Or water meters that are older than 15 years will be replaced without testing the water meter.
- (3) Charge When Water Meter is not Registering Accurately
- If any water meter in use ceases to register or is determined by Council to be not registering accurately, Council may:-
- (a) Estimate the period during which such water meter was not in working order; and
- (b) Calculate the deemed water consumption using all reasonable information available to Council.

The process for calculating the actual charge for water consumption where the water meter ceased to register or the water meter was not registering accurately is as follows:-

- (a) Where the meter is still registering a quantity of water at normal flow rates:-
- If the error in registration established by test is within 5 per cent of the actual quantity of water passing through the meter at normal flow during the test then the consumption as recorded will be deemed to be the quantity of water consumed;
- If the error in registration established by test reveals that the quantity of water recorded is 5 per cent or in excess of 5 per cent less than the actual quantity of water passing through the meter at normal flow during the test then the consumption as recorded will be deemed to be the quantity of water consumed;
- If the error in registration established by test reveals that the quantity of water recorded is 5 per cent or in excess of 5 per cent more than the actual quantity of water passing through the meter at normal flow during the test, then the consumption for billing purposes may be determined by Council by any of the methods listed below.
- (b) Where the meter does not register a quantity of water at normal flow rates, Council may estimate the amount of water supplied during the period that the meter was not in working order:-
- According to the average daily consumption for the period last preceding the date upon which the meter was examined and found in order; or
  - By taking an average of the quantity used during the corresponding period of the previous year; or
  - Upon the consumption registered by the meter after being adjusted; or
  - The Council may cause a check meter to be fixed and estimate the charge upon the registration of that meter.

**SC6.3.2.4.13 Council may shut off the water supply without notice, if there is:**

- (a) A serious risk to public health; or
- (b) A likelihood of serious injury to person or damage to property; or
- (c) Another emergency.

#### **SC6.3.2.5 Relevant Law**

Toowoomba Regional Council Addendum to the WSA Code 03 for Water Supply

Toowoomba Regional Council Sub Metering Guidelines and Specifications

Annexures for TRC Addendum to the WSA Code 03 for Water Supply

---

<sup>4</sup> Amended on 27 April 2018

# **TOOWOOMBA REGIONAL COUNCIL**

## **ADDENDUM TO THE WATER SUPPLY CODE OF AUSTRALIA WSA 03 – 2011 Version 3.1**

**TOOWOOMBA REGIONAL COUNCIL SUPPLEMENT  
TO WATER SUPPLY CODE OF AUSTRALIA  
WSA 03 – 2011**

**PREAMBLE**

This supplement describes the Toowoomba Regional Council's requirement for water reticulation works additional to those specified in Water Supply Code of Australia, WSA 03 – 2011 –V3.1. This supplement must be read in conjunction with the Code.

**NOTE**

The clause and table numbers given in this supplement correspond with the clause and table numbers given in the Water Supply Code of Australia, WSA 03 – 2011 –V3.1.

**PART 0: GLOSSARY OF TERMS, ABBREVIATIONS AND REFERENCES**

**I. Glossary**

Water Agency –Toowoomba Regional Council  
The Authority – Toowoomba Regional Council

**II. Abbreviations**

TRC – Toowoomba Regional Council  
Council – Toowoomba Regional Council  
DEWS – Department of Energy and Water Supply

**PART 1: PLANNING AND DESIGN**

**1. GENERAL**

**1.2.3 Concept Plan Format**

The concept plan is to be provided by TRC at developer's cost.

**1.2.7 Instrumentation and Control Systems**

Flow and pressure measurement points shall be installed for all bulk / trunk water mains and significant water mains as determined by TRC.

**2. SYSTEM PLANNING**

**2.2 System Planning Process**

**2.2.2 Extending / upgrading an existing Water Supply System**

The developer/designer shall submit details of water demand generated by the proposed development so as to quantify the impact of proposed system extension on the affected water supply network. Where available, a water supply network simulation model shall be used to conduct analysis.

**2.3 Demands**

Assessment of demands shall be based on methodology identified by [Department of Energy and Water Supply \(DEWS\), "Planning Guidelines for Water Supply and Sewerage – APRIL 2010" – Chapter 5: Demand / Flow Projections.](#)

Unit water consumption shall be specified as per equivalent person (EP). EP is defined as water supply demand for a person resident in a detached house. An equivalent tenement (ET) is defined as a detached house. Derivation of EPs should be based on:

Residential EPs to be derived from location specific tenement occupancy ratios. Where this information is unavailable, the adopted EP/ET ratio as provided in the Australian Bureau of Statistics website.

Non Residential EPs being derived from metered water consumption information and adopted EP rates. Where this is unavailable, Guideline unit rates (e.g. DEWS, WSA) may be used, upon agreement with Council. In the absence of location specific data, the following diurnal patterns shall be used.

**Residential**

Time	Factor	Time	Factor
0:00	0.12	12:00	0.97
0:30	0.06	12:30	0.92
1:00	0.02	13:00	0.90

The Department of Energy and Water Supply Guidelines list the key planning parameters and indicative ranges for peaking factors for demand assessment.

In the absence of location/study specific data the following base values shall be adopted:

- MDMM = 1.5 AD**
- PD = 2.25 AD**
- PH = 4.5 AD**
- NRW = 34.5 L/EP/d**

**2.5 System Hydraulics**

**2.5.2 Network Analysis**

System analysis shall have regard for network modelling principles and methodology identified in [Department of Energy and Water Supply Planning Guidelines, Chapter 6 - Network Modelling](#).

**2.5.3 Operating Pressures**

### 2.5.3.2 Maximum Allowable Service Pressure

Maximum allowable service pressure shall be 80 m.

### 2.5.3.3 Minimum Service Pressure

Minimum service pressure for Residential shall be 30.0 m.

Minimum service pressure for Industrial /Commercial shall be 35.0 m.

Absolute minimum service pressure for Residential shall be 22.0 m by Council approval only.

Absolute minimum service pressure for Industrial and Commercial sites shall be 25 m by Council approval only.<sup>5</sup>

## 2.6 Water Quality

### 2.6.3 Water Age

Figure 5.2 shall be superseded by TRC drawing no 101213.

## 2.8 Pumping Stations

Refer Hydraulic Design Section in Department of Energy and Water Supply Planning Guidelines.

## 2.9 Service Reservoirs

Refer Hydraulic Design Section in Department of Energy and Water Supply, Planning Guidelines.

The following table shall be used as a guide for allowance for emergency storage.

System Type	Volume, kL
Zone with Special Risk / Hazard Building*	400
Commercial Supply Zone	220
General Supply Zone	150
Small Community	75

\*Only for Special Risk / Hazard > 30 L/s

## 3. HYDRAULIC DESIGN

In the absence of other location/study specific requirements, system capacity shall be based on water supply infrastructure sizing components identified in the Department of Energy and Water Supply, Planning Guidelines, Chapter 7 – Options for Service Provision.

### 3.1.5 Fire flows

Provision of network capacity to fight fires shall be based on the Department of Energy and Water Supply, Planning Guidelines, Chapter 6 – Network Modelling.

However, where the developed area (or part thereof) of a residential development has a density greater than 35 ET/ha (excluding road reserves), the area exceeding this density shall be classed as High Density for the purposes of fire provision.

Locations in or adjacent to Medium or High Risk bush fire zones should have special consideration. The following table provides modelling scenarios for consideration.

System Category	Modelling Requirements
General Urban	4 hydrants at 10 L/s for 2 hours to maintain 6 m head at the hydrants. A net positive inflow must be maintained in the remainder of the network.
Small Community	4 hydrants at 5 L/s for 2 hours to maintain 6 m head at the hydrants. A net positive inflow must be maintained in the remainder of the network.

<sup>5</sup> Amended on 27 April 2018

Minimum fire fighting modelling results of less than 16 m head are to be considered as “Pressure Disadvantaged” and will be deemed to be a network failure.<sup>6</sup>

## 4. PRODUCTS AND MATERIALS

### 4.1 General

In locations specified below, the pipe material shall be as shown.

Under roadways or proposed roadways:

Ductile iron, steel - but not PVC

Other locations:

DN300 and above - ductile iron, steel but not PVC

Under DN300 - ductile iron, PVC-U Series 1 (only where compatibility with an existing installation is required), PVC-M or PVC-O Series 2 (with PVC-O to have SN greater than 10 (a minimum stiffness of 10,000 N/m.m)).

The appropriate pressure rating, re-ratings for operating conditions (temperature, water hammer, cyclic loading, etc) and corrosion protection is required for the specific application.

The above is on the proviso that for certain specific projects (for example large diameter trunk mains, long lengths of "trunk" delivery mains), project specific designs and pipe material selection will be undertaken to minimise the whole of life cost to Council.

GRP (Glass Reinforced Plastic) and ABS (Acrylonitrile Butadiene Styrene) pipes shall not be permitted and PVC fatigue de-rating shall be as per WSAA technical notes.

## 5. GENERAL DESIGN

### 5.2 Reticulation Design for Water Quality

#### 5.2.1 Layout of water mains

Typical Cul-de-sac details shall be in accordance with TRC Drawing No. 101213. Enveloper pipe for OD63 polypipe is required only for road crossings.<sup>7</sup> End of water main control valves are to be resilient seated gate valves.

#### 5.2.3 Link mains

Linked water mains are required wherever determined by Council. The location of water mains shall require the provision of public lanes or walkways of a width required by Council (nominally 4-6 m wide).

### 5.4 Location of water mains

#### 5.4.1 General

Water mains shall be located in public space (such as road reserves, laneways, parks etc.). The location shall be:

- (a) Located within the footpath (verge) and on the high side of the street carriageway where applicable.
- (b) Alignments and levels of water mains shall be in accordance with the relevant standard cross section for each street type. Refer TRC drawing no 101214 for a typical detail of services allocation in a footpath.

<sup>6</sup> Amended on 27 April 2018

<sup>7</sup> Amended on 27 April 2018

- (c) If Items (a) & (b) cannot be achieved then an easement must be obtained in favour of Toowoomba Regional Council. Any structures including swimming pool and spa pools should be located clear of zone of influence of water infrastructures. Anchor rods of any foundation, building or structures are not located within the zone of influence.<sup>8</sup>
- (d) A minimum of 4.0 m unobstructed vertical clearances is to be maintained over the water supply infrastructure and must not have additional fill placed over the water supply infrastructure.<sup>9</sup>
- (e) Mains shall not be laid on the same horizontal alignment as stormwater pipes, wastewater pipes, gas or electricity conduits. Cover to all other services is to be shown on the design plan where crossings are required. A minimum vertical separation of 200 mm for pipes ≤ DN300 and 500 mm for pipes > DN300 shall be maintained where services cross.
- (f) Reticulation water mains must not be located under concrete footpaths.

**5.6 Shared Trenching**

Not permitted. Under no circumstances are electricity conduits or gas to be laid in the same trench as any water service.

**5.9 Connection of new mains to existing mains**

Live connection shall be carried out by TRC at developer’s cost.

**5.11 Property Services**

All pipe networks shall be constructed by developer at sub division stage. However TRC will provide the live connection to the network. Water meters shall be installed by TRC on request. Property service connections to mains shall be in accordance with TRC Drawing No 101214. Kerb markers are to be installed in line with envelope conduits for property connections.

Envelope pipe diameter shall not be greater than 2 x the diameter of the water service being incorporated. Water meters are to be located in the footpath within 1 m of adjoining property boundaries. TPFNR (Tapping Pressure Ferrule Non Return Valve) shall be installed with a PVC access shaft brought to the surface as per TRC Drawing No. 101214.

**5.12 Obstructions and Clearances**

**5.12.6 Deviation of Water mains**

**5.12.6.1 General**

Multiple joint deflections shall not be more than 50% of the manufacturer’s recommendations.

**7. STRUCTURAL DESIGN**

**7.4.2 Pipe cover**

The required minimum depth of cover to water mains measured from top of kerb shall be as follows.

Diameter of the pipe	In Footpath Cover (mm)	In roads and road crossing Cover (mm)
DN100	600	900
DN150	600	900
>DN150	900	1200

<sup>8</sup> Amended on 27 April 2018

<sup>9</sup> Amended on 27 April 2018

Maximum cover should be less than 1500mm, unless otherwise approved by Council.  
 Maximum allowable centreline deviation from the given alignment shall be  $\pm 75$  mm horizontally and  $\pm 50$  mm vertically.

Where the grade of a footpath is non-standard, the depth of cover to the main as detailed above, shall not be measured from the kerb, but shall be measured from the finished surface level.

Where a reticulation branch enters a steeply graded street, minimum cover must be maintained by cutting pipe lengths and deflecting joints to suit or by use of vertical bends.

Where a DN100 or a DN150 main connects to a trunk main, cover to the smaller diameter main shall be reduced to the required 600 mm below top of kerb over a maximum of 2 pipe lengths. The maximum design deflection allowable at a joint shall be 50% of manufacturer's recommendations.

### 7.8 Above-Ground Water Mains

Where mains could be exposed to impact (e.g. floating debris) or heat from fire, water main material types such as mild steel or ductile iron shall be used.

### 7.9 Pipeline Anchorage

#### 7.9.2.4 Timber and recycled plastics thrust blocks

Timber and recycled plastics thrust blocks are not permitted.

## 8. APPURTENANCES

### 8.1 Valves – General

#### 8.1.2 Valve siting principles

Valves are to be located on every leg of a 'T'.

A maximum of twenty (20) properties to be isolated at one time

TRC may, at its absolute discretion, consider a reduction of number of valves depending on site specific circumstances in well designed water supply networks.

Valve are to be resilient seated sluice valves.

#### (a) Construction valves

A construction valve shall be a sluice valve of the same diameter as the main and shall be installed at the commencement of all new work, except as otherwise approved by TRC. There should be at least 5 m from the point of connection to TRC water main to allow for live connection by TRC.

#### (b) Section valves

A section valve shall be a sluice valve of the same diameter as the main. Section valves shall be installed on all reticulation branches.

No more than two reticulation branches shall be located between section valves. Notwithstanding this requirement, each section of main between valves shall serve a maximum of 20 allotments.

### 8.2 Stop Valves

#### 8.2.4 Stop valves for reticulation mains

Stop valves selection criteria shall be as follows.

Table 6.1: Stop Valve Spacing Criteria

Water main size	Number of property	Maximum spacing
-----------------	--------------------	-----------------

DN	service connections (nominal)	m
≤DN150	20	300
DN200-DN300	20	300

## 8.2.7 Stop Valves – Location and arrangements

### 8.2.7.1 General

Stop valves to be installed on all legs of a tee as per Clause 8.1.2.

## 8.8 Hydrants

### 8.8.5 Hydrant Installation

Standard depths for valves and hydrants should be in the range of 150-250mm from the finish surface level.

### 8.8.8 Hydrant Spacing

The Maximum spacing between hydrants shall be 80m and within 40 m of the property.

Hydrant spacing in rural residential development can be 120m. In large lot rural residential and industrial developments, hydrants should be located by maintaining 40m to the nearest point of the property boundary.

Developments that include small lots may require a higher level of water supply provisions including, but not limited to the provisions specified in the DEWS Planning Guidelines. This may include additional fire hydrants.

### 8.8.9 Hydrant location

Hydrants are to be located at ±200 mm from dividing property boundary.

For water mains located within the road carriageway and the alignment is less than 2.5 m from the kerb face, the fire hydrant shall be positioned adjacent to the driveway preferably on the dividing boundary side.

For hatchet blocks, an additional hydrant shall be provided in the Council water main if the access handle of the hatchet is greater than 30 m.

In reticulated areas, hydrants shall be located at street intersections.

### 8.11.2 Marker posts and plates

Marker posts shall be made of fire resistant material where located within or adjacent to medium or high risk bushfire hazard zones

### 8.11.4 Kerb markings

Brass Indicators Discs shall be installed in the kerb to indicate the alignment of all water reticulation crossings.

## 9. DESIGN REVIEW AND DRAWINGS

### 9.2 Design Drawings

#### 9.2.4 Contents of Design Drawings

Design drawings shall be in accordance with TRC Drawing No 101215.

Plans shall be at a scale of 1:500 or 1:1000 at A3 provided that the details are legible at this size. Generally, the North Point direction shall be towards the top of the drawings.

Design drawings shall detail the individual services to each lot of the subdivision. In addition, all other service locations shall be shown locally at points of crossover with the water reticulation main.

**9.4 Recording of WORK-AS CONSTRUCTED information**

All As-constructed drawings and details must be certified by a Registered Professional Engineer, Queensland.

Methodology used for the As-constructed drawings must be in accordance with ADAC standards (<http://www.adac.com.au/>) and shall be included a digital copy showing all *as constructed* details supplied in AutoCAD drawing files with two hard copies.

The datum for all levels in As-constructed drawings shall be in Australian Height Datum (AHD) in metres to three decimal places e.g. 600.999. Projection shall be based on MGA 94 Map Grid of Australia Zone 56 coordinate system.

As-constructed drawings for water mains must include a minimum of:

- pipe materials;
- type of coating;
- lengths;
- pipe jointing types;
- diameters;
- main alignments to property boundaries (to a tolerance of 0.1m);
- water main chainages;
- depths where possible;
- positions/chainages of all fittings, etc. in relation to property boundaries (to a tolerance of 0.1m);
- water service locations, size and length of services for each pipe diameter and material type; and
- Locations of end caps of property connections in relation to property boundaries (to a tolerance of 0.1m).

Each sheet that has as-constructed details annotated must have the revisions title box annotated with the words " As-constructed " and the next revision number allocated for that sheet.

**PART 2: CONSTRUCTION**

**10. GENERAL**

All construction works must be certified by a Registered Professional Engineer, Queensland,

**12. PRODUCTS AND MATERIALS**

**12.5 Concrete Works**

All concrete works shall be in accordance with relevant Australian Standards.

**16. PIPE EMBEDMENT AND SUPPORT**

Grading of bedding material for pipes shall be as follows:

Sieve size aperture width (AS 1152)	Percentage passing
9.5 mm	100
6.7 mm	90-100
425 µm	40-90
150 µm	0-10

## **17. FILL**

### **17.1.1 Material Requirements**

Approved selected backfill for trench material to within 300 mm of finished surface level

## **19. ACCEPTANCE TESTING**

### **19.4 Hydrostatic Pressure Testing**

#### **19.4.1 General**

Testing must be in accordance with the WSA Code - Section 19. Compressed air testing shall not be used for pressure pipe. Each pipe joint and anchor blocks should be exposed during pressure testing.

## **22. CONNECTIONS TO EXISTING WATER MAINS**

### **22.1 General**

Live Connection must be carried out by TRC

### **TRC Drawings**

TRC 101213 - Typical Cul-de-Sac & Intersection Details

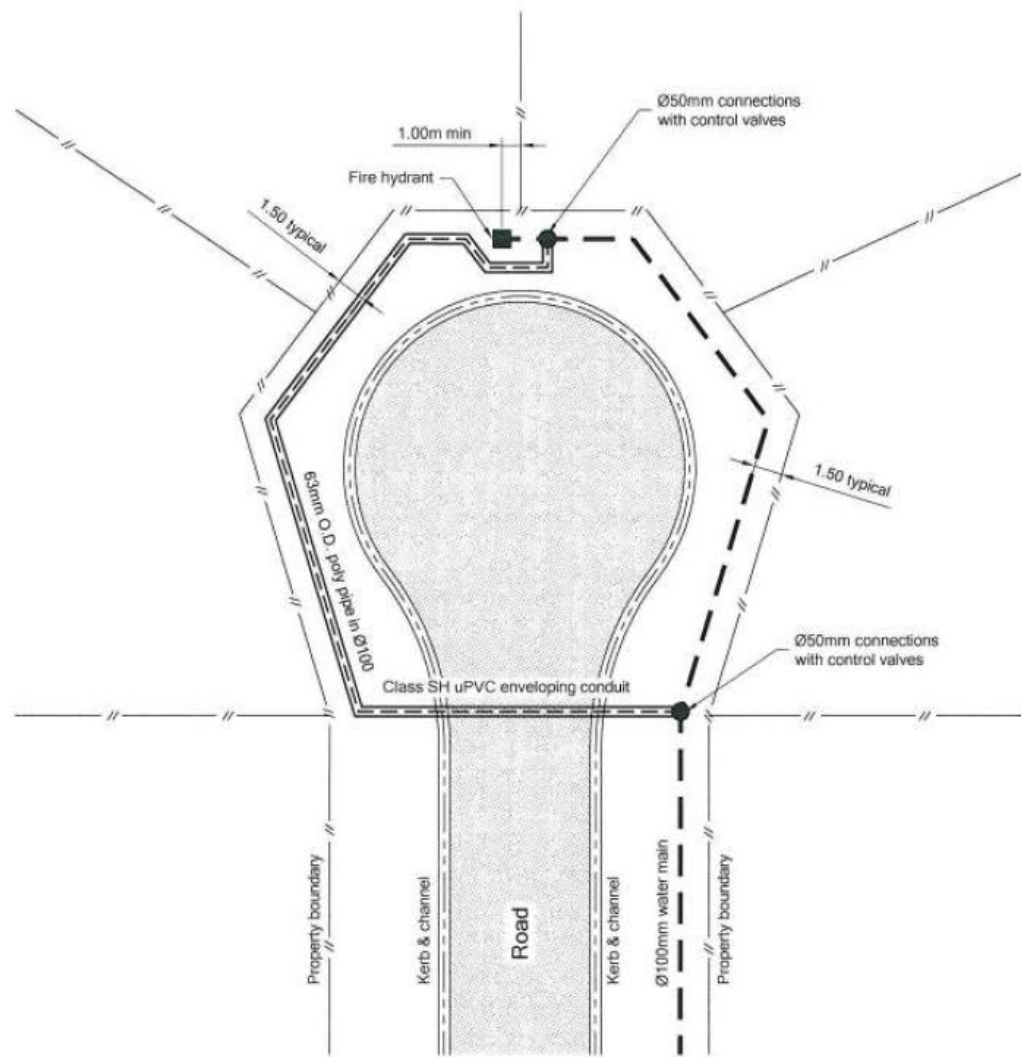

TRC 101214 - Typical Utility Services Allocation & Water Service Enveloping Conduit

TRC 101215 – Example of Design Layout Plan

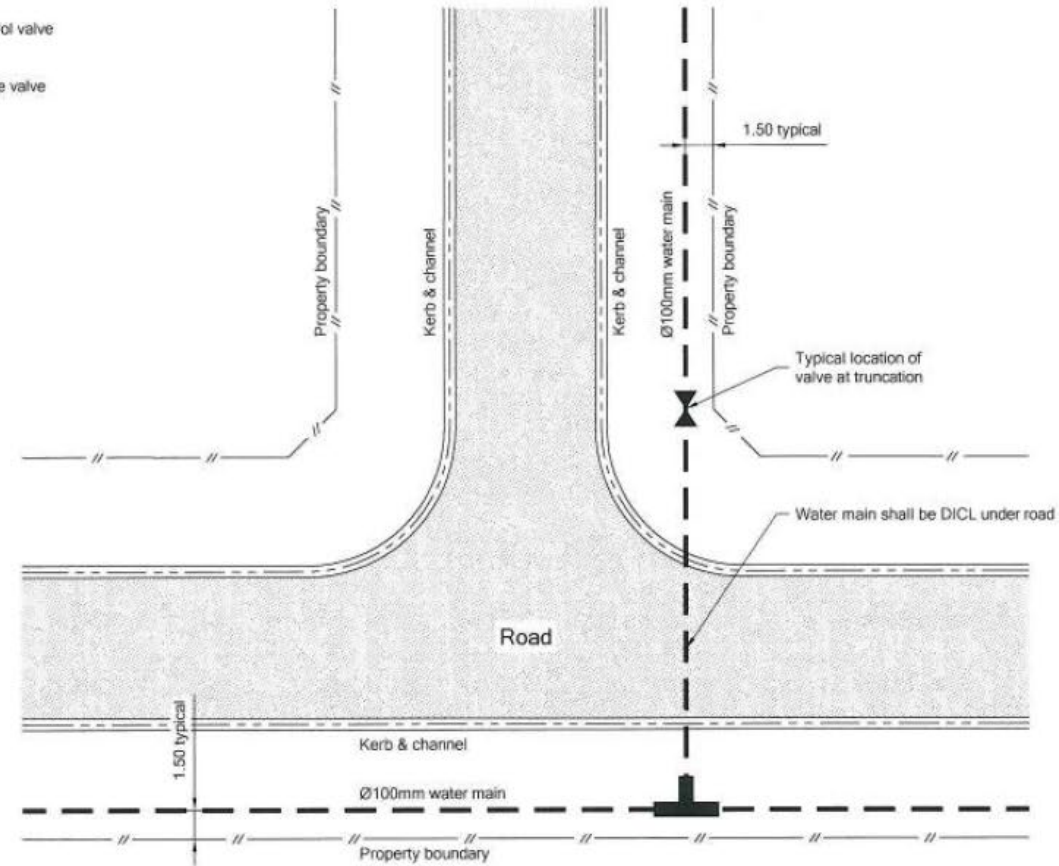

TRC 101216 – Example of “As Constructed” Plan

## **Sub Metering Guidelines & Specifications**

## 1. PURPOSE

This Guideline provides the framework to guide Development requiring secondary water meters for all unit and mixed developments across Toowoomba Regional Council.

## 2. SCOPE

The scope of this Guideline is limited to:

- Water metering
- Master meters
- Sub meters
- Automatic reading systems
- Designs of sub metering systems
- Maintenance

## 3. DEFINITIONS

AMR – The term AMR mean Automatic Meter Reading and also includes Digital Electronic Readouts (DER) such as a display panel that can be scrolled through to read the respective sub-meter consumption.

Accessible – The term accessible for water meter reading, maintenance and/or replacement purposes, mean accessible within reasonable time (between 5 am – 5 pm), with the sub-meters being located in a non-locked enclosure requiring a non-key access (PIN code), and no being obstructed by vehicles or other plant or equipment or vegetation.

Applicant – An applicant/share holder is the Body Corporate of an existing complex that has made the decision to fit sub-meters to all lots within the complex.

Body Corporate – The term body corporate refers to a corporation or body of persons or even an individual person(s) making up the corporate entity. The purpose of the body corporate is to manage common property.

Boundary – Boundary means the area between the property external walls and pathways, streets or fence.

Common Area – The term common area means an area of common property.

Common Property – The *Body Corporate and Community Title Management Act 1997* defines common property, for a community title scheme is, effectively, freehold land forming part of the scheme land but not forming part of a lot included in the scheme.

Common Property Water Consumption – The term common property water consumption refers to water used in common properties within a complex for irrigation, cleaning, recreation fixtures, etc. The common property water consumptions for each meter read cycle will be decided by deducting the sum of consumption registered by all sub-metered from the consumption registered by the master meter. Water consumption through a communal hot water system is part of common property water consumption under this policy.

Community Management Statement – The *Body Corporate and Community Title Management Act 1997*, Chapter 1 Part 4 Section 12, describes a community management statement as a document that a) identifies land; and b) otherwise complies with the requirements of this Act for a community management statement. One such requirement is to include a contribution schedule.

Community Title Scheme – The *Body Corporate and Community Title Management Act 1997* defines community title scheme is a single community management statement recorded by the registrar identifying land (the **scheme land**); and the scheme land.

Complex – A complex includes Community Titles Schemes (CTSs) and multi sole occupancy units of class 2, 4, 5, 6, 7 or 8 building and each storey of a class 5 building.

DualCV – DualCV stands for Dual Check Valve, a device used to prevent back flow and thus cross contamination of potable water network.

Developer – A developer is a corporation or body of persons or even an individual, who builds a development in which the houses/units form part of a complex and can be sold to individual owners.

Existing Development – An existing development is any development whereby the development has a Plumbing Compliance Certificate or the Developer has lodged a request for a Plumbing Compliance Certificate prior to 1 January 2012.

Horizontal Development – A horizontal development includes free standing units or attached units supplied through one water meter for each unit and where the meter is usually located at the boundary of the unit.

Lot Entitlement – The *Body Corporate and Community Title Management Act 1997*, Chapter 2 Part 5 Section 46, describes a lot entitlement, for a lot included in a community titles scheme, means the number allocated to the lot in the contribution schedule or interest schedule in the community management statement.

Management – The term management refers to the management of complex which can be a body corporate of a community title scheme or a representative body of a multi sole occupancy complex.

Master Meter – A master meter is a water meter upstream of sub-meters and is used to register the bulk consumption of a multi-unit complex.

Occupant/Owner – The occupant/owner is an occupant or owner of a house, unit, flat or an apartment within a complex.

Pattern Approval – The term pattern approval refers to a certificate issued by the National Measurement Institute. This certificate states that a meter of certain make and model has passed a set of tests and met a set of requirements in order to be used by a service provider for trade purposes.

Public Area – The term public area mean an area to which the public has lawful access – for example, a footpath.

Sole Occupancy Unit – The term sole occupancy unit, in relation to a building, means:

A room or other part of the building for occupation by one or a joint owner, lessee, tenant, or other occupier to the exclusion of any other owner, lessee, tenant, or other occupier, including, for example-  
A dwelling; or

A room or suite of associated rooms in a building classified under the Building Code of Australia as a class 2, 4, 5, 6, 7 or 8 building; or

Any part of the building that is common area or common property.

Storey – The term storey means a space within a building which is situated between one floor level and the floor level next above, or if there is no floor above, the ceiling or roof above, but not -

a space that contains only –

a lift shaft, stairway or meter room; or –

a bathroom, shower room, laundry, water closet or sanitary compartment; or –

accommodation intended for not more than three vehicles; or -

a combination of the above; or  
a mezzanine.

**Sub-meter** – The term sub-meter is used to describe individual water meters within multi-unit complexes. The term also differentiates from master meter that measures the supply of water to multi-unit complex as a whole.

**Sub-Metering** – The term sub-metering refers to the installation of individual water meters to measure what consumption to individual houses, units, flats to measure water consumption to individual houses, units, flats or apartments that form part of a complex.

**Unit** – A unit is a house, flat, lot of land or an apartment within a complex.

**Vertical Development** – The term vertical development includes developments of more than one storey and developments where units are supplied through metered located inside the development in a common area such as stairwell landing or beside elevator shafts.

**Water Meter** – A water meter means a device, including equipment related to the device, for measuring the volume of water supplied to premises. An example of equipment related to the device is a pulse meter or an automatic meter reader and associated technology or similar devices.

**Water Service Provider** – The term water service provider, for premises, means the person registered under the *Water Supply (Safety and Reliability) Act 2008*, chapter 2, part 3, as the water service provider for retail water services for the premises.

**Water Supply** – The term water supply means the plumbing supplying water to meterable premises for a water service.

## 4. CONTENT

### 4.1 Master Meter

A master meter shall be installed at the property boundary of the complex to measure the water supply entering the complex.

The master meter is to be installed by Toowoomba Regional Council (TRC) at the expense of the developer.

The pipes or any fittings between the master meter and the sub-meter assembly and beyond the sub-meter assembly shall remain the property of the building owner for maintenance and replacement.

Council will own the master meter and sub-meters and be responsible for its maintenance, verification, calibration, and replacement.

## 5. SUB METERS

### 5.1 Sub-Meter Specifications

- All meters and sub meters shall be pattern approved by the National Measurement Institute (NMI).
- The developer is responsible for the installation of sub-meters. TRC Plumbing and Drainage will conduct inspection(s) and make sure that the installation has been completed in accordance with *Plumbing and Drainage Act 2002* and AS/NZS 3500.
- All sub-meters shall be purchased from Toowoomba Regional Council (TRC) and approved accordingly.
- The size of all sub-meters in a complex shall be determined by hydraulic analysis. Generally 20mm sub-meters shall be used.
- All sub-meters shall be installed in the approved format (refer drawing SMP002-SMP005).

- All sub-meters shall be installed in a common or public access area and have unique serial numbers.
- Sub-meters shall be installed no higher than 1800mm.
- All sub-meters shall be tagged. The tag shall be fixed to the pipe work adjacent to the meter or attached to the meter and have the unit number displayed in permanent ink or engraved. The tag shall not interfere with any data recording equipment if applicable.
- All sub-meters shall be housed in an approved sub-meter enclosure or an approved meter pit.
- Sub-meters shall be installed with isolation valves on each side of the meter together with an adjustable meter coupling on one side of the meter and a standard meter coupling on the other side of the meter to enable safe removal of the meter.

### 5.2 Cold Water Systems

- Sub-meters of 20mm or in some applications larger sizes, if the hydraulic design prescribes that, shall be installed within developments to measure individual units and common property water supply.
- All sub-meters shall be installed within a development at the time of construction and shall be of the same make and model and have unique serial numbers.

### 5.3 Hot Water Systems

- Where hot water is supplied through individual hot water systems there is no requirement to install a separate sub-meter for each individual hot water system. The hot water in this situation is measured through the cold water sub-meter.
- Where hot water is supplied from a communal hot water system these systems are required to be sub-metered. A sub-meter is required to be installed on the cold water intake of the communal hot water system and hot water consumption will be billed to the Body Corporate as common property water consumption.

## 6. METER READING

- TRC will read sub-meters and master meters once every six months either from the sub-meter or from the water meter data reading panel if an Automatic Meter Reading (AMR) system has been installed.
- TRC meter readers or contractors employed by TRC may upgrade or reconfigure the AMR system once TRC has assumed responsibility for the system.
- There are two methods of obtaining the meter reading data. They are:

#### Direct Data Acquisition

Direct data acquisition is where the meter reading is obtained directly from the sub-meter and is suitable for complexes that are deemed accessible for water sub-meter meter reading, maintenance and replacement.

#### Remote Data Acquisition

Remote Data acquisition is where the meter reading data is obtained via Automatic Meter Reading (AMR) technology. Where the complex is deemed not accessible (Gated Communities), for meter reading requirements the developer shall install an AMR system to allow for the centralised collection of water meter data.

## 7. AUTOMATIC METER READING (AMR)

- When an AMR system is utilised a water meter data reading panel must be installed within a public access area and within approved water meter data reading enclosure.
- When an AMR system is utilised, the master meter and all sub-meters must be linked to the AMR system to enable the meter reading data to be collected from the water meter data reading panel.
- The AMR system must be installed by the manufacturers' authorised technician.

- The AMR system, related equipment and installation must be approved by TRC.

## 8. COMPLEX DESIGN

### 8.1 Horizontal Complexes

- Within a horizontal complex development (i.e. group housing), sub-meters shall be installed at the property boundary in an accessible area to facilitate direct data acquisition, maintenance and replacement.
- All fences and retaining walls are to be located around and on the property side of any meter/meter box assemblies, to allow full access for Council staff. This includes all vegetation (excluding lawn) (refer diagram 1, 2 & 4).
- In this situation sub-meters will be housed in TRC approved meter boxes and shall not be installed in locations that pose a potential risk to the general public (i.e. walkways) and the meter box lids shall have a non-slip surface.
- Some horizontal complexes may be deemed not accessible for the purposes of obtaining the meter reading data directly (i.e. gated security access) and in these situations an AMR system shall be installed.
- In some cases certain common property areas must also be sub-metered (i.e. designated common facility areas such as recreation areas, common gymnasiums, etc).
- Rain Water Tanks
  - A shared rain water tank in a complex shall have the supply to the tank/automatic change over device connected between the main meter and the secondary meter. The water consumed will be billed to the Common Property Water Consumption.

### 8.2 Vertical Complexes

- Vertical complexes (i.e. high rise developments greater than 2 storeys) shall require the installation of an AMR system which utilises an accessible water meter data reading panel to obtain the sub-meter data (refer diagram 3).
- Vertical complexes of less than 2 storeys shall require secondary meters installed refer diagram 2 & 4.
- All fences and retaining walls are to be located around and on the property side of any meter/meter box assemblies, to allow full access for Council staff. This includes all vegetation (excluding lawns) (refer diagram 1 & 2).
- The location of water sub-meter enclosures shall be in a common or public access area to allow access to sub-meters for maintenance or replacement.
- Vertical complexes will require a water sub-meter enclosure to house sub-meters. It is envisaged that in most cases more than one water sub-meter enclosure will be required for each storey
- If the sub-meters are to be located within a fire cabinet enclosure the fire and safety rating shall not be compromised and the water sub-meter enclosure shall be adequately drained to prevent seepage into the infrastructure.
- In some cases certain common property areas must also be sub-metered (i.e. designated common facility areas such as recreation areas, common gymnasiums, etc).

### 8.3 Mixed Use Complexes

- Mixed Use complexes (i.e. mixed residential and non-residential) shall require the installation of an AMR system which utilises an accessible water meter data reading panel to obtain the sub-meter data.
- The location of the water sub-meter enclosures shall be in a common or public access area to allow access to sub-meters for maintenance/replacement and reading (refer diagram 5).

- Mixed Use complexes will require a water sub-meter enclosure to house sub-meters. It is envisaged that in most cases more than one water sub-meter enclosure will be required (refer drawing SMP003).
- If the sub-meters are to be located within a fire cabinet enclosure the fire and safety rating shall not be compromised and the water sub-meter enclosure shall be adequately drained to prevent seepage into the infrastructure.
- In some cases certain common property areas must also be sub-metered (i.e. designated common facility areas such as recreation areas and public toilets).

#### 8.4 Existing Developments

- Existing developments are exempt from the conditions of the guidelines and specifications as in some cases; it may be impractical to sub-meter all units/lots in existing complexes.
- However, the property owner of an existing complex may elect to install sub-meters and shall be responsible for all associated costs and must therefore follow the same requirements as for new premises.

#### 8.5 Ownership And Maintenance

- TRC will be responsible for the maintenance, repair and replacement of any component of the master meter and for the reading of the master meter.
- TRC will also be responsible for the maintenance, repair and replacement of any component of the sub-meter assemblies and also for the reading and testing of the sub -meters.
- TRC will not accept ownership or the maintenance responsibility for the plumbing between the sub-meter assembly and the master meter, the plumbing downstream of the sub-meter assembly, the isolation valves either side of the sub-meter or any AMR and associated AMR infrastructure installed at the complex; this infrastructure remains the responsibility of the complex management.
- TRC may also elect to replace sub-meter at any reasonable time at no charge. The management of the complex will be advised prior to the replacement.

### 9. ENCLOSURES

#### 9.1 Water Sub-Meter Enclosures

- The location of the water sub-meter enclosure is to be installed in a public access area. Sub meters must be installed in common area where adequate access for maintenance is available. TRC approval shall be required.
- The enclosure shall be marked clearly with the words 'Water Sub-Meters' on the outside of the door. Where more than one sub-meter enclosure is installed then each enclosure shall have an ID number fixed to the cabinet as shown (refer drawing SMP003).
- The sub-meters may be installed in a fire facility cabinet with installation dimensions to be maintained.
- All enclosures shall be either bonded or drained to the stormwater system to manage seepage from maintenance events. All penetrations shall be sealed.
- A minimum area of 2 square metres or an area of 1.5 x door width (whichever is greater) shall be provided for maintenance and customer interaction.
- The enclosure shall have adequate lighting and shall not require additional aids such as ladders to maintain meters or obtain meter data.
- Any enclosure door/s that are in a pedestrian access pathway or high use area shall have the latch flush mounted and shall be a one point stainless steel quarter turn latch.
- Any external enclosure shall be in accordance with water meter data reading enclosure construction (refer drawing SMP005).
- The enclosure material shall be either 1mm thick steel or 1.5mm 5251 or 5083 alloy aluminium. Enclosures shall be powder coated to suit building architecture.
- All external edges are to be rounded with all edges and corners accurately and neatly folded.
- Enclosure door/s shall have a hand operated one point stainless steel quarter turn latch to close the door and shall have lift off type plated brass hinges with stainless steel hinge pins.

- If a lock is fitted to the exterior door/s then the lock shall use a standard common keyway cut to Series 003.

### 9.2 Water Sub-Meters In-Ground

- The sub-meter assembly shall be installed within a suitably sized prefabricated meter box with a non-slip lid (refer drawing SMP002) and a base to exclude soil but allow free drainage of the box. Bedding of soil shall not surround or cover any components within the meter box.
- The meter capsules reading dial shall be no more than 300mm from the surface level.
- Where pavement surfaces exist installations shall be provided with road box with base support system similar to standard hydrant and valve box support system.
- Tags to be attached with Zip ties or similar.

### 9.3 Water Meter Data Reading Enclosures (Amr)

- Any development that requires an AMR system will install an accessible enclosure to house the water meter data reading panel (refer drawing SMP005).
- The location of the water meter data reading enclosure is to be in a public access area.
- The water meter data reading enclosure shall be clearly marked with the words 'Water Meter Data' with a minimum height of 25mm and be permanently fixed in the centre to the outside of the door.
- The meter reading data panel displays shall be installed no higher than 1800mm and no lower than 1200mm.
- A minimum area of 2 square metres or an area of 1.5 x door width (whichever is greater) shall be provided for maintenance and customer interaction
- The enclosure shall have adequate lighting and shall not require additional aids such as ladders to maintain meters or obtain meter data.
- The enclosure shall be drained to prevent seepage into the infrastructure.
- Any enclosure door/s that are in a pedestrian access pathway or high use area shall have the latch flush mounted and shall be a one point stainless steel quarter turn latch.
- Enclosure doors shall have a locking system capable of exerting sufficient pressure to ensure proper contact of the sealing medium all around the door with lift off type hinges, chrome plated solid brass body (80mm minimum length) with stainless steel hinge pins.
- If a lock is fitted to the exterior door/s then the lock shall use a standard common keyway cut to Series 003.
- The enclosure shall house a common 240 Volt electrical power supply outlet for AMR system use within 300mm of the meter read panel.
- The enclosure shall be sufficiently ventilated and rated to IP65.
- The material of any external enclosure shall be either minimum 2mm thick 316 Grade stainless steel or 3mm 5251 or 5083 alloy aluminium powder coated colour beige AS 2700S-1996 (X43) or matched to suit building architecture.
- All external edges are to be rounded with all edges and corners accurately and neatly folded.

**NOTES:**

1. THE CABINET SHALL BE MARKED CLEARLY WITH THE WORDS "WATER SUB METERS" ON THE OUTSIDE OF THE DOOR AS SHOWN. WHERE MORE THAN ONE SUB METER CABINET IS INSTALLED THEN EACH CABINET SHALL HAVE A CABINET ID NUMBER FIXED TO THE OUTSIDE OF THE DOOR AS SHOWN.
2. ALL CABINETS SHALL BE EITHER BLUNDED AS SHOWN OR DRAINED TO THE STORMWATER SYSTEM TO MANAGE SEEPAGE FROM MAINTENANCE EVENTS. ALL PENETRATIONS SHALL BE SEALED.
3. WHERE AMR IS TO BE INSTALLED AS A HARD WIRE OR RADIO SYSTEM, REFER TO AMR SPECIFICATIONS FOR ADDITIONAL INSTALLATION DETAILS.
4. THE CABINET SIZE SHALL PROVIDE FOR THE MINIMUM DIMENSIONS SHOWN.
5. WATER SUB METER CABINETS SHALL ALLOW ACCESS TO THE METER ASSEMBLY FOR MAINTENANCE AND CUSTOMER INTERACTION.
6. A MINIMUM AREA OF 2900 METERS OR AN AREA OF 1.5 X DOOR WIDTH (WHICHEVER IS GREATER) SHALL BE PROVIDED FOR MAINTENANCE AND CUSTOMER INTERACTION. THE CABINET SHALL HAVE ADEQUATE LIGHTING AND SHALL NOT REQUIRE ADDITIONAL AIDS SUCH AS LADDERS TO MAINTAIN METERS OR TO OBTAIN METER DATA.
7. EXTERNAL SUB METER CABINETS SHALL BE IN ACCORDANCE WITH THE DETAILS SHOWN IN TRC SUB METERING GUIDELINE POLICY SECTION 8.1.
8. THE SUB METERS MAY BE INSTALLED IN A FIRE FACILITY CABINET WITH SHOWN INSTALLATION DIMENSIONS TO BE MAINTAINED.
9. SUB METERS SHALL BE TAGGED, REFER TO TRC STANDARD DRAWING SMP004 FOR TAG DETAILS.

### SC6.3.3 Waste Water Infrastructure Policy

#### SC6.3.3.1 Purpose

- (1) The purpose of this planning scheme policy is to ensure that:
  - (a) The Development near a Sewerage and Stormwater drainage and associated infrastructure does not:
    - (i) Adversely impact the function of the service;
    - (ii) Place an additional load on the service; or
    - (iii) Unduly increase future maintenance costs.and
  - (b) Adequate access is provided to all Sewerage, Water supply and Stormwater drainage and associated infrastructure for future maintenance.
- (2) In order to satisfy the above purpose, Waste water Infrastructure policy is developed to Guide development affecting new and existing waste water infrastructure across the Toowoomba Regional Council planning scheme area.<sup>10</sup>

#### SC6.3.3.2 Scope

- (1) The scope of this policy is limited to:
  - (a) Sewer applications
  - (b) Sewer Siting
  - (c) Sewer connections
  - (d) Sewer extensions
  - (e) Sewer disconnections
  - (f) Design of sewer systems
  - (g) Construction of sewer systems
  - (h) Easements
  - (i) Maintenance

#### SC6.3.3.3 Definitions

- (1) Council – Toowoomba Regional Council
- (2) Standard Connection – A DN100 property connection made to an existing DN150 or DN225 sewer within the property boundary.

#### SC6.3.3.4 Content

##### SC6.3.3.4.1 Sewer Applications

- (1) All applications are to be made in accordance with the *Plumbing and Drainage Act 2002*. Such an approval under this Act is deemed an approval under the *Water Supply (Safety and Reliability) Act 2008*.

##### SC6.3.3.4.2 Sewer Siting

- (1) All works involving building over or near TRC infrastructure must comply with the Department of Housing and Public Works, Queensland Development Code Mandatory Policy 1.4.
- (2) Where the deem to comply requirements of QDC MP 1.4 cannot be met, it is TRC's preference that sewers be rerouted clear of all development.  
Where sewers cannot be rerouted, then replacement is required. For Class 1 single unit residential buildings where a sewer is located in such a position that the amenity of the

<sup>10</sup> Amended on 27 April 2018

allotment is compromised, rerouting or replacement of the sewer shall be undertaken by TRC at TRC's cost. However this does not include hatchet or like allotments where the creation of a new lot causes the sewer to compromise a building area within the new lot. Rerouting or replacement of the sewer in this case must be undertaken by TRC at Developer's cost and will be conditioned accordingly on all Re- configuring a lot (RAL) Stage applications.

In all other classes of development, rerouting or replacement of the sewer must be undertaken by TRC at no cost to TRC. This includes sealed driveways and car parking areas.

Council will not generally apply discretion to sewerage infrastructure located in standard alignment. However this requirement will be assessed on a case by case basis.<sup>11</sup>

- (3) All work associated with the relocation or renewal of sewer infrastructure shall be carried out by TRC prior to the commencement of any building works by the developer. Relocation of sewer infrastructure or renewal and protection of sewer infrastructure as a result of commercial development or sub division shall be at no cost to Council.
- (4) All work on existing infrastructure or live sewer works in relation to connections, relocation, renewal, maintenance and/or repair must be carried out by TRC or its approved contractors only.

#### **SC6.3.3.4.3 Sewer Connections**

- (1) For subdivisions, the full cost of constructing new sewers, connecting new sewers and providing property connections to existing infrastructure shall be at no cost to TRC.
- (2) The full cost of providing property connections to existing infrastructure and extending infrastructure to service private property shall be at no cost to TRC.
- (3) Requests for connections larger than the standard connection will be considered by TRC upon written request. All connections other than a standard connection will require a written quotation as per Fees and Charges.

#### **SC6.3.3.4.4 Sewer Extensions**

- (1) For subdivisions, the full cost of sewer main extensions is the responsibility of the developer.
- (2) The property owner is to meet the full cost of sewer main extensions to service a private property.

#### **SC6.3.3.4.5 Sewer Disconnections**

- (1) Applications must comply with SC6.3.3.4.1 Sewer Applications.
- (2) Sewer disconnections may be considered by Council upon written request. The applicant is responsible for all costs associated with the disconnection.
- (3) Disconnection of sewer services to blocks with an existing structure will not be approved.

#### **SC6.3.3.4.6 Design of Sewer Systems**

- (1) Design of sewer systems shall be in accordance with the current Water Services Association of Australia (WSAA) Codes (1-5) and Toowoomba Regional Council addendum for WSA 02.

---

<sup>11</sup> Amended on 27 April 2018

#### **SC6.3.3.4.7 Construction of Sewer Systems**

- (1) Construction of sewerage systems shall be in accordance with the current Water Services Association of Australia (WSAA) Codes (1-5) and Toowoomba Regional Council Addendum for WSA 02.
- (2) The full cost of the sewerage system shall be at no cost to Council, including any modifications required to the existing sewerage system.
- (3) **On Maintenance Inspections and Maintenance Period**  
The purpose of On Maintenance Inspections including CCTV Inspections is to ensure the works have been constructed in compliance with the approved plans and specifications. On Maintenance CCTV Inspections will be carried out for all new underground sewer infrastructure by Council or Council approved Contractor at no cost to Council. Works approved for 'On Maintenance' will be placed 'On Maintenance' for a minimum period of 12 months, or as otherwise advised by Council, from the date of formal notification by Council.  
During this period, responsibility and liability for rectification of defects and for any damage that may occur, regardless of the cause, lies with the Developer, not the Council. Steps must be taken by the developer to prevent damage occurring during the maintenance period including damage likely to be caused during onsite construction. On Maintenance CCTV Inspections will be carried out by Council or Council Approved Contractor at no cost to Council.
- (4) **Council Off Maintenance Inspection**  
The purpose of the 'Off Maintenance inspections including CCTV Inspections' are to ensure that the constructed works have performed satisfactorily during the 'Maintenance Period'. Any further defects identified during Off Maintenance Inspections are to be rectified at no cost to Council before works are certified as being Off Maintenance. Off Maintenance CCTV Inspections will be carried out by Council or Council Approved Contractor at Council cost.
- (5) **Defects in Live Sewers**  
Any defects identified in live sewers during the Maintenance period are to be rectified by the Council at no cost to Council. Any subsequent CCTV inspections will be at no cost to Council.

#### **SC6.3.3.4.8 Easements**

- (1) All future sewerage infrastructure greater than DN225 gravity sewers and all pressure pipelines in private properties shall be located in easements.  
Easement width will be determined by TRC to ensure access for maintenance.
- (2) The easement instrument must reserve the right to enter the easement at any time without notice for the purpose of constructing, extending, maintaining, controlling, managing the work, inspecting or replacing.
- (3) Buildings or other structures shall remain clear of easements.

#### **SC6.3.3.4.9 System Maintenance**

- (1) In the case of a house drain blockage, the property owner is responsible for rectification work at owner's cost.
- (2) If the blockage is found to be in the extension or main line, rectification work will be carried out at the cost of TRC.
- (3) TRC will not accept responsibility for any costs incurred by the owner in relation to locating the blockage where the blockage was found to be located in the house drainage.

#### **SC6.3.3.4.10 Maintenance Structures**

- (1) Where a property owner requires a change in level of a maintenance structure located within their property and forming part of TRC's sewerage reticulation system be altered, such alteration is to be carried out by TRC at the property owners expense.
- (2) Unobstructed maintenance access should be provided for at all times (24/7).<sup>12</sup>

#### **SC6.3.3.5 Relevant Law**

*Water Act (2000)*

*Water Supply (Safety and Reliability) Act (2008)*

*Plumbing and Drainage Act (2002)*

Toowoomba Regional Council Addendum to the WSA Code 02 for Sewerage

Annexures for TRC Addendum to the WSA Code 02 for Sewerage

---

<sup>12</sup> Amended on 27 April 2017

# **TOOWOOMBA REGIONAL COUNCIL**

## **ADDENDUM TO GRAVITY SEWERAGE CODE OF AUSTRALIA WSA 02 – 2014 Version 3.1**

**TOOWOOMBA REGIONAL COUNCIL SUPPLEMENT  
TO GRAVITY SEWERAGE CODE OF AUSTRALIA  
WSA 02 – 2014, V 3.1**

**PREAMBLE**

This Addendum describes the Toowoomba Regional Council's requirement for sewer reticulation works additional to those specified in Gravity Sewerage Code of Australia, WSA 02 – 2014-3.1. This supplement must be read in conjunction with the WSA 02 – 2014 Code.

**NOTE**

The clause and table numbers given in this supplement correspond with the clause and table numbers given in the Gravity Sewerage Code of Australia, WSA 02 – 2014-3.1

**PART 0 GLOSSARY OF TERMS AND ABBREVIATIONS**

**I. Glossary**

Water Agency – Toowoomba Regional Council

The Authority – Toowoomba Regional Council

**II. Abbreviations**

TRC – Toowoomba Regional Council

DEWS – Department of Energy and Water Supply

**PART 1: PLANNING AND DESIGN**

**2. SYSTEM PLANNING**

**2.4 PLANNING PARAMETERS**

Determination of planning parameters should be based on methodology identified by Department of Energy and Water Supply, Planning Guidelines for Water Supply and Sewerage – April 2010 – Chapter 5: Demand / Flow Projections.

Unit wastewater flow should be specified as per equivalent person (EP). EP is defined as sewage discharge for a person resident in a detached house. An equivalent tenement (ET) is defined as a detached house. Derivation of EPs should be based on:

Residential EPs being derived from location specific tenement occupancy ratios. Where this information is unavailable, adopt an EP/ET ratio as provided on the Australian Bureau of Statistics website.

Non Residential EPs being derived from metered water consumption information and adopted EP rates. Where this is unavailable, Guideline unit rates (e.g. DEWS, WSAA) may be used, upon agreement with Council.

In the absence of location / study specific data, adopt an ADWF value of 150 L/EP/d (75 % of 200 L/EP/d) for conventional gravity sewer systems in residential areas.

Adopt an ADWF of 180 L/EP/d for industrial / commercial areas.

Refer Section 3 – Flow Estimation, regarding the use of other parameters.

The DEWS Guidelines list the key planning parameters for demand assessment.

Parameter	Comments
Average dry weather flow (ADWF)	This is the combined average daily sanitary flow into a sewer from domestic, commercial and industrial sources (WSAA). Note: this excludes any IIF.
Peak dry weather flow (PDWF)	The most likely peak sanitary flow in a sewer during a normal day. It exhibits a regular diurnal pattern with morning and evening peaks (WSAA).
Peak wet weather flow (PWWF)	Includes: PDWF + GWI + IIF
Groundwater infiltration (GWI)	Groundwater (non-rainfall dependent) infiltration. Generally exists for sewers laid below groundwater table. Groundwater infiltration enters the system via defective pipes or joints and leaking manhole walls. GWI can generally be estimated as the flow between midnight and 4.00 am during dry periods.
Rainfall dependent inflow & infiltration (IIF)	Peak (rainfall dependent) inflow and infiltration. This includes flow discharged into sewer from: <ul style="list-style-type: none"> <li>• unauthorised roof, ground or stormwater drainage</li> <li>• leaking manhole covers</li> <li>• disconnected sewers</li> <li>• low disconnector traps</li> <li>• indirect infiltration of rainwater entering defective pipes and joints from the surrounding soil.</li> </ul>

## 2.6 PLANNING REVIEW

The developer/designer should submit details of sewage discharge to be generated by the proposed development, so as to quantify the impact of proposed system extension on the affected sewerage network. Where available, a sewerage network simulation model shall be used to conduct analysis. System analysis should have regard for network modelling principles and methodology identified in DEWS Guidelines, Chapter 6 - Network Modelling.

In the absence of other location/study specific requirements, system capacity should be based on sewerage infrastructure sizing components identified in the DERM Guidelines, Chapter 7 – Options for Service Provision. For sizing of Sewerage System Components (for conventional sewerage), must be based on Table 5.15 of DEWS Guidelines.

## 3. FLOW ESTIMATION

Where available, sewerage design and analysis should be based on flow rates derived from calibrated hydraulic models.

In the absence of hydraulic modelling information and site specific inflow / infiltration data, design flow for CGS sewers should be based on the “Historical Queensland Approach” as detailed in Chapter 5 of DEWS Guidelines and outlined below:-

Peak Dry Weather Flow (PDWF) =  $C2 \times \text{ADWF}$  where  $C2 = 4.7 \times (\text{EP})^{-0.105}$

PWWF =  $(5 \times \text{ADWF})$  or  $(C1 \times \text{ADWF})$ , whichever is the larger  $C1 = 15 \times (\text{EP})^{-0.1587}$  (note: the minimum value for  $C1 = 3.5$ )

#### 4. PRODUCTS AND MATERIALS

GRP(Glass Reinforced Plastic), PE(Poly Ethylene) and ABS(Acrylonitrile Butadiene Styrene) pipes shall not be permitted.

Stiffer class pipe >SN8 or DICL pipes should be used for gradients less than 1:100

#### 5. DETAIL DESIGN

##### 5.2 DETAILED DESIGN CONSIDERATIONS

###### 5.2.3 Sewer layout

Sewer layout must be approved by TRC as per specific requirements listed under “Section 5: Detail Design” of this Addendum.

###### 5.2.4 Location of Sewers

###### 5.2.4.1 General

Following requirements must be satisfied in selecting horizontal alignment of sewers in private properties:

- Sewers greater than DN150 should not be located in private property unless otherwise approved by TRC.
- Queensland Development Code, Mandatory Part MP1.4 must be followed for building over/near sewers.
- Sewers in public and private properties shall generally be located on the following alignments:
  - Within allotments, on a 1.5m alignment from side and rear boundaries (maximum 2.0 m where there is rear of allotment change).
  - With manholes located at 1.5 m from the side alignment and the sewer may vary up to a maximum of 3.0 m into the allotment.
  - Within the front of allotments, a maximum of 3.0 m from the F.P. boundary.
- Where a proposed sewer is to pass through private property, permission in writing from the affected property owner is required to be forwarded to the Authority with the design plans submitted for checking.
- Swimming pools and spa pools are located clear of the Zone of Influence and not closer than 1.5m to a Sewer, stormwater drain, water main or any Associated Structure.

- Anchor rods of any foundation, Building or Structure are not located within the Zone of Influence.
- Do not have fill placed over the maintenance holes. Where additional fill is required around the maintenance holes, the level of the MH cover is between 50-100mm above the surrounding finished surface level for a minimum distance of 2.5m from the centre of the Access Cover should be maintained.<sup>13</sup>

#### **5.2.4.4 Sewers located in small lots (lot Area<=450m2)**

Service easement is required if sewers are located rear or side boundaries of the property.

#### **5.2.8 Easements**

As approved by TRC on case by case basis<sup>14</sup>.

### **5.3 HORIZONTAL ALIGNMENT OF SEWERS**

#### **5.3.2 Roads, Reserves and open space**

In special circumstances when sewers are located within street reserves, the alignment shall be in accordance with the relevant standard cross-section for each street type.

With the Authority's consent, other alignments may be approved due to the location of the site constraints such as fences, verges constraints or other services. Sewers should be constructed to boundary alignments unless otherwise approved.

#### **5.3.8 Horizontal curves in sewers**

Horizontal curves in gravity sewers are not permitted.

### **5.4 OBSTRUCTIONS AND CLEARANCES**

#### **5.4.5 Underground Obstructions and services**

Sewers and property connections shall be constructed at the shallowest possible depth such that: all property can be completely drained for the calculated minimum depth of property connection.

- There is no conflict with other services.
- It is desirable that there is at least 1.5 m *horizontal* separation from any existing or proposed water main. Where this separation is not achievable, the sewer may be laid closer provided the main is in a separate trench or on an undisturbed earth shelf located on one side of the sewer and with the bottom of the water main at least 0.5 m above the top of the sewer. Where a water main crosses under or over a sewer, there should be at least 0.2 m vertical distance between the outside of each main. Where a water main crosses under a sewer, special structural support should be provided for the sewer.

<sup>13</sup> Amended on 27 April 2018

<sup>14</sup> Amended on 27 April 2018

## 5.5 PIPE SIZING AND GRADING

### 5.5.7 Minimum Grades for Self Cleansing

#### 5.5.7.2 Reticulation sewers

Unless the designer can demonstrate that the proposed grade will achieve a self-cleansing and slime stripping velocity in the sewer main in accordance with WSA 02 Section 5.5.7 & Section 5.5.8, the requirements of this section shall take precedence over any other guidelines (including the DEWS Planning Guidelines listed in Section 2.4 in this Addendum for reticulation sewers).

Situation	Grade	% Grade
Up to 6 lots	1:60	1.67%
Up to 11 lots	1:100	1.0%
Up to 15 lots	1:100	1.0%

Any proposal for lesser grades shall demonstrate that a minimum critical shear stress of 0.15 kg/m<sup>2</sup> over the critical area of the pipe invert contained by an angle of 20 degrees subtended each side of the pipe centreline; with any such proposal subject to approval by TRC at its absolute discretion.

## 5.6 VERTICAL ALIGNMENT OF SEWERS

### 5.6.3 Minimum cover over sewers

Minimum cover over sewers shall be as follows. Any reduction of these stated cover requirements shall be subjected to written approval from TRC.

Sewer Location	Minimum Cover (m)
Street carriageway	1.2
Verge/Foot path	0.9
Private property	0.9 (to av. Lot level)
Parkland	0.9

Maximum cover of sewers shall be 4.0 m to the invert, unless otherwise approved by TRC.

### 5.6.6 Grading through MHs

Table 5.12 – Amended as follows.

Deflection Angle at MH degrees	Minimum Internal fall (mm)
0 -30	40 (minimum drop)
30-60	50
60-90	80

Maximum deflection angle shall be 90 degrees. Otherwise drop through manholes should be at least 100mm.

#### 5.6.6.3 Internal falls through MHs joining sewers of different diameters

Where the sewer increases in size, soffits will normally be matched in level at the centre of the maintenance hole.

### **5.6.7 Vertical curves in sewers**

Vertical curves in sewers are not permitted.

### **5.6.8 Compound curves**

Compound curves in sewers are not permitted.

## **6. PROPERTY CONNECTION**

### **6.1 General**

Sewer connections greater than 100mm diameter shall be connected to the existing sewerage system via a MH. Sewers and property connections shall be constructed at the shallowest depth, such that all properties can be drained completely for the calculated minimum depth of property connection.

### **6.2 Limitations of Connection to Sewers**

Property connections shall not be made to sewers of DN375 or greater sewers, unless otherwise approved by TRC. Connection to pressure mains (rising mains) is not allowed. Connection to a pressure sewer network (WSA 07) is not covered by this Policy or the Addendum.

### **6.3 Methods of the property connection**

#### **6.3.3 Buried interface method**

Part (a) not accepted.<sup>15</sup>

Part (b) shall be applied as per TRC Drawing No. 101211. Sewerage connection point should be located within the lot being serviced and should be minimum 1.0m clear of storm water connection point or stormwater MH.<sup>16</sup>

### **6.5 Location of Property Connection Points**

#### **6.5.2 Vacant lots**

Connections points shall be located so that a minimum of 80% of the served property can be drained to the service point.

#### **6.5.3 Lots with existing buildings**

Clear access for connection points must be maintained as per QDC MP1.4

### **6.6 Property Connection Sewers**

#### **6.6.2 'Type 7 spur' or 'Y'- Property Connections**

Y-Property connections and multiple connections are not approved.

### **6.7 Length of Property Connection Sewers**

Maximum length of sewer extension at the end of sewer main shall be 35m.

Maximum length of property connection sewers as per Clause 6.7

<sup>15</sup> Amended on 27 April 2018

<sup>16</sup> Amended on 27 April 2018

## 7. MAINTENANCE STRUCTURES

### 7.1 TYPES OF MAINTENANCE STRUCTURES

7.1 (b), (c), (d) & (e) are not permitted.

Table 7.1 are permitted only for maintenance structures. For a permanent end of a property connection sewer, a manhole is not required provided it is less than 35m from the downstream maintenance structure and the gradient of sewer is not less than 1 in 100.

Figures 7.1, 7.2, 7.3 & 7.4 are not permitted.

### **7.3.2 Maintenance structure spacing – Reticulation sewers**

For reticulation sewers (sewers less than DN375), the maximum distance between any two consecutive maintenance structures shall be 90 m and subject to the provisions of Clause 7.3.1

### **7.3.3 Maintenance Structure spacing – Branch and Trunk sewers**

Subject to Clause 7.1 and 7.3.2, maximum distance between any two consecutive maintenance structures in sewers greater than or equal to DN375 shall be 120 m.

### **7.6.7 Diameters of MHs**

Minimum Internal diameter of manholes shall be 1050 mm.

### **7.6.9 Ladders, step irons and landings**

Step irons and fixed ladders are not permitted.

### **7.9 Maintenance Structure Covers**

All MH covers are to be watertight and gas tight. Access covers /Manholes in trafficable areas to be an approved heavy duty type capable of carrying the proposed vehicles accessing the area.

**7.9.1.(e)** Bolt down maintenance hole covers shall be used in areas subject to localized flooding or below 1 in 100 year flood (Q100), in parks and reserves and for all sewers greater than DN375.

## **8. ANCILLARY STRUCTURES**

### **8.3 VERTICAL AND NEAR VERTICAL SEWER**

Vertical and near vertical sewers are not permitted.

### **8.6 INVERTED SYPHONS**

Inverted syphons are not permitted.

### **8.7 OVERFLOWS / EMERGENCY RELIEF STRUCTURES (ERS)**

#### **8.7.1 General**

(a) On incoming sewers to a pumping station to enable controlled overflow during shutdown or facility failure. Generally the Water Agency requires the provision a minimum of 4 hours storage within a pumping station and upstream sewers (based on ADWF) before discharging via the ERS (Refer to WSA 04).

## **8.9 WET WEATHER STORAGE**

### **8.9.2 Design Considerations**

Provision of wet weather storage for the purposes of reducing sizing requirements of downstream infrastructure is not permitted.

## **9. STRUCTURAL DESIGN**

### **9.2 PRODUCTS AND MATERIALS**

GRP(Glass Reinforced Plastic), PE (Poly Ethylene) and ABS(Acrylonitrile Butadiene Styrene) pipes are not permitted. Minimum class of pipe for uPVC shall be SN8 (SEH).

TRC may consider approval of other pipe materials on a case by case basis.

### **9.6 GEOTECHNICAL CONSIDERATIONS**

#### **9.6.6 Slip areas**

A geotechnical report is to be submitted for consideration by the authority prior to approval.

## **10. DESIGN REVIEW AND DRAWINGS**

### **10.1 DESIGN REVIEW**

Design drawings shall be in accordance with WSA SEW 1100 & 1101, but plans shall be at a scale of 1:500 or 1:1000 at A3 size provided that the details are legible at this size. Generally, the North Point direction shall be towards the top of the drawing.

Design drawings shall detail the individual services to each lot of the subdivision. In addition, all other service locations shall be shown locally at points of crossover with water reticulation main.

#### **10.2.1 General**

New maintenance structures shall be shown as a blocked-in circle and existing maintenance structures is to be an unfilled circle;

New sewers shall be a thick line and existing sewers shall be shown in broken line work;

Clear labelling of notations and standards notes;

Permanent Survey Bench marks and/or survey stations shall be provided.

## **PART 2: CONSTRUCTION**

### **11. GENERAL**

The Authority has no supplementary requirements in this section.

### **12. GENERAL CONSTRUCTION**

#### **12.2 ORDER OF CONSTRUCTION, TESTING AND COMMISSIONING**

(e) The connection of new sewerage reticulation to Council's existing system forms part of the infrastructure realisation to be carried out at the Developer's expense. Generally, Council staff shall

undertake all live connections to Council's sewerage infrastructure. The Contractor shall not carry out the connection without Council approval.

## **12.5 PROTECTION OF PEOPLE, PROPERTY AND ENVIRONMENT**

### **12.5.2 Road reserves or other thoroughfares**

#### **12.5.2.1 Road Opening Permits**

A traffic management plan shall be prepared in accordance with MUTCD.

## **12.7 OPERATION OF WATER SUPPLY NETWORK**

Operation of live water supply network must only by TRC unless otherwise approved by TRC.

## **12.8 ALTERATIONS OF EXISTING SERVICES**

TRC infrastructure shall be altered only by TRC at the owner /developer's cost.

## **12.11 LATENT CONDITIONS**

TRC are to be notified for approval.

## **13. PRODUCTS AND MATERIALS**

### **13.1 APPROVED PRODUCTS AND MATERIALS**

As specified in Section 4.0

## **16. PIPE LAYING AND JOINTING**

### **16.2 HORIZONTAL AND VERTICAL DEFLECTION OF SEWERS**

Horizontal and vertical deflections in sewers are not permitted.

#### **16.2.3 Horizontal Curves**

Horizontal curves in sewers are not permitted

#### **16.2.4 Vertical curves**

Vertical curves in sewers are not permitted.

#### **16.2.5 Compound curves**

Compound curves in sewers are not permitted.

### **16.9 MARKING OF PROPERTY CONNECTION SEWERS AND DEAD ENDS**

Method of identifying connection point location shall be Peg & Tape; sacrificial PVC at 1.0 m above ground or connection point vertical shafts shall be raised to the surface at the sub division stage. Surface pipes shall be capped and glued on to prevent easy access to the pipe.

## **17. MAINTENANCE HOLES (MHs)**

### **17.3 GLASS REINFORCED PLASTICS (GRP) MHs**

Not permitted.

#### **17.4 POLYETHYLENE (PE) MHs**

Not permitted.

#### **17.5 POLYPROPYLENE (PP) MHs**

Not permitted.

#### **17.9 MH DROPS**

Internal drops shall not be permitted.

#### **17.10 LADDERS, STEP IRONS AND LANDINGS**

Step irons or fixed ladders shall not be permitted.

### **23. CONNECTION TO EXISTING SEWERS**

Live connections to existing systems shall not be permitted, unless otherwise approved by TRC.

### **25. WORK AS CONSTRUCTED DETAILS**

Methodology used for the As Constructed drawings must be in accordance with ADAC standards (<http://www.adac.com.au/>) and shall be included a digital copy showing all *as constructed* details supplied in AutoCAD drawing files with two hard copies.

The datum for all levels in As Constructed drawings shall be in Australian Height Datum in metres to three decimal places e.g. 600.999. Projection shall be based on MGA 94 Map Grid of Australia Zone 56 coordinate system.

As Constructed drawings for sewer mains must include a minimum of:

- Pipe materials;
- Diameters;
- Main alignments to property boundaries (to a tolerance of 0.1m);
- Locations of end caps of property connections in relation to property boundaries (to a tolerance of 0.1m);
- Invert levels and finish levels of maintenance Structures (to a tolerance of 0.01m);
- Finished surface levels at each R.P. peg (to a tolerance of 0.01 m);
- Sewer main chainages;
- Sewer depths;
- Maintenance structure sizes and type of lids e.g. bolt down, trafficable etc.

Each sheet that has as-constructed details annotated must have the revisions title box annotated with the words "*as constructed details added*" and the next revision number allocated for that sheet.

## SC6.4 PSP No. 4 - Master Planning<sup>17</sup>

### SC6.4.1 Introduction

- (1) Short Title -The planning scheme policy may be cited as PSP No 4. – Master Planning.
- (2) Commencement - The planning scheme policy commences on 27 April 2018.

#### SC6.4.1.1 Purpose of the Planning Scheme Policy

- (1) The purpose of the planning scheme policy is to set out the requirements for the preparation of master plans to demonstrate compliance with relevant assessment criteria.

#### SC6.4.1.2 Authorised Legislation

- (1) The planning scheme policy is made under Chapter 2, Part 3, Division 2, [s22] of the *Planning Act 2016* and Chapter 3, Part 1 of the *Ministers Guidelines and Rules*

#### SC6.4.1.3 Relationship to the Planning Scheme

- (1) This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Toowoomba Regional Planning Scheme 2012.

#### SC6.4.1.4 Definitions

- (1) Terms used in this planning scheme policy are defined in Schedule 1 - Definitions.

#### SC6.4.1.5 Interpretation of the planning scheme policy

- (1) A term used in the planning scheme policy which is not defined in Schedule 1 - Definitions is to be interpreted in accordance with Part 1.3 of the Toowoomba Regional Planning Scheme 2012.

### SC6.4.2 What is a Master Plan?

- (1) A Master Plan is used to ensure a coordinated and logical pattern of development, which integrates land use and infrastructure planning.
- (2) Master Plans ensure that future development:
  - (a) contributes to a logical pattern and sequence of development;
  - (b) facilitates efficient use of land and infrastructure;
  - (c) facilitates integration with existing and future urban development, having regard to:
    - (i) movement networks;
    - (ii) open space networks; and
    - (iii) access to community infrastructure; and
  - (d) responds to constraints, natural and cultural values on the site and mitigates any impacts on areas of environmental and cultural significance.
- (3) The purpose of the Master Plan is to guide subsequent development in particular areas, especially where provisions of the planning scheme are general, but due to the scale and nature of a development a more details plan is required.
- (4) The planning scheme requires that Master Plans be prepared prior to development occurring in greenfield areas, including the Emerging Community Zone, Low Density Residential Zone and Low-Medium Density Residential Zone. In these circumstances,

---

<sup>17</sup> Amended on 27 April 2018

Master Plans will be undertaken in advance of, or in conjunction with development proposals for urban purposes.

### SC6.4.3 Preparing a master plan

- (1) A Master Plan is prepared at the start of a development process to guide subsequent development applications.
- (2) Approval of a Master Plan will be granted by way of a variation request to which section 61 of the *Planning Act 2016* applies.
- (3) The application will be impact assessable and require public notification. A preliminary approval under a Master Plan may also vary the level of assessment for subsequent development applications and future development of the site.
- (4) A Master Plan is part of the supporting information accompanying the development application for preliminary approval. It is recommended that applicants engage with Council early to ensure all relevant matters are addressed and to streamline the development application process.
- (5) The scope of a Master Plan is to be tailored to match the scale and likely impacts of the development and will also be influenced by nature of issues associated with the site and immediate locality.
- (6) The following are the matters to be considered and information to be provided in a Master Plan. The information required by this planning scheme policy is in addition to the matters outlined in Planning Scheme Policy No. 1 – Development Application Requirements.

#### SC6.4.3.1 Site and context assessment

- (1) The first step in preparing a Master Plan is to undertake an assessment of the site and surrounding locality.
- (2) The site and context assessment should address each of the following elements:
  - (a) Topography:
    - (i) Contours & levels; and
    - (ii) Digital terrain mapping.
  - (b) Existing movement network:
    - (i) Street networks;
    - (ii) Intersections and treatments;
    - (iii) Public transport routes and stops; and
    - (iv) Pedestrian and cycle paths (existing and proposed).
  - (c) Existing built form and land uses:
    - (i) Residences, structures and other buildings;
    - (ii) Land uses and other approvals on surrounding sites; and
    - (iii) Location of centres, employment generators, community and social infrastructure (e.g. schools and community facilities).
  - (d) Existing and proposed infrastructure:

- (i) Utilities (water, waste water, stormwater, electricity, information and communications technologies)
- (ii) Open space network and its connections to adjoining developments.

#### **SC6.4.3.2 Constraints and Opportunities Identification**

- (1) The second step in preparing a master plan involves the identification of local constraints. This will be guided by the mapped overlays in the planning scheme and outcomes of the site and context assessment.
- (2) The more constrained the site, the greater the level of detail required to assess the proposal.
- (3) The constraints and opportunities identification should address each of the following elements:
  - (a) Where land is identified on an Overlay map, the relevant constraints of the overlay must be considered (refer Part 8 of the Planning Scheme – Overlays). Additional constraints may also be identified through detailed site assessment;
  - (b) Constraints and management strategies identified in an applicable and/or adjoining Local Plan(s) must be considered; and
  - (c) Buffer/separation areas to existing uses that are incompatible with future urban residential development (e.g. industry, landfill or good quality agricultural land).

#### **SC6.4.3.3 Analysis and Preliminary Land Use Strategy**

- (1) The third step in preparing the master plan involves an integrated analysis of:
  - (a) the site and context assessment; and
  - (b) the constraints and opportunities, and to develop a preliminary land use strategy that
  - (c) identifies broad land use types and development density;
  - (d) demonstrates the need for non-residential land uses (if proposed);
  - (e) demonstrates compatibility and integration with surrounding properties and land uses;
  - (f) details infrastructure supply and coordination, including:
    - (i) capacity and sequence/timeframe of infrastructure required to service development;
    - (ii) how proposal fits into the overall utility, transport network and open space networks;
  - (g) addresses constraints management; and
  - (h) demonstrates alignment with Toowoomba Regional Planning Scheme including:
    - (i) Strategic Framework (strategic outcomes, specific outcomes and land use strategies);
    - (ii) LGIP;
    - (iii) Overlays;
    - (iv) Local Plans; and
    - (v) Codes.

#### **SC6.4.3.4 The Master Plan**

- (1) The final step involves documenting the Master Plan.
- (2) The final master plan should address the following elements:

- (a) Land use allocation;
- (b) Neighbourhood design;
- (c) Lot and development yield, including demonstrated housing variety size and style;
- (d) Movement system design and integration including existing and proposed:
  - (i) Road network and hierarchy;
  - (ii) Pedestrian and cycle network; and
  - (iii) Public transport routes and stops;
- (e) Infrastructure provision (conceptual design, layout and servicing arrangements);
- (f) Staging plan for development;
- (g) Urban design outcomes;
- (h) Plan of development (where seeking to vary the effect of the planning scheme);  
and
- (i) Integration into the Preliminary Approval Document (PAD).

## **SC6.5 PSP No. 5 – Intentionally left blank**

This section intentionally left bank.

## SC6.6 PSP No. 6 – Heritage Places

### SC6.6.0 Introduction

- (1) Short Title -The planning scheme policy may be cited as PSP No 6. – Heritage Places.
- (2) Commencement - The planning scheme policy commences on 14 June 2013.

### SC6.6.0.0 Purpose of the Planning Scheme Policy

- (1) The purpose of the planning scheme policy is to identify Heritage Places referred to within the Toowoomba Regional Planning Scheme 2012.

### SC6.6.0.1 Authorised Legislation

This planning scheme policy is made under Chapter 3, Part 4, Division 2, and Chapter 3, Part 5 of the *Sustainable Planning Act 2009*.

### SC6.6.0.2 Relationship to the Planning Scheme

This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Toowoomba Regional Planning Scheme 2012.

### SC6.6.0.3 Definitions

Terms used in this planning scheme policy are defined in Schedule 1 - Definitions.

### SC6.6.0.4 Interpretation of the planning scheme policy

A term used in the planning scheme policy which is not defined in Schedule 1 - Definitions is to be interpreted in accordance with Part 1.3 of the Toowoomba Regional Planning Scheme 2012.

### SC6.6.1 List of Heritage Places<sup>18, 19</sup>

The following properties are Heritage Places for the purposes of administering the Toowoomba Regional Planning Scheme 2012:

ID	Street No	Street Name	Locality	Real Property Description	QLD Heritage Place (state listed)
2/MIL/0111	0	Albert Street	MILLMERRAN	part of SP124722/10	No
2/MIL/0119	2	Alfred Street	MILLMERRAN	RP198785/1	No
1/TOO/0001	6	Ann Street	TOOWOOMBA CITY	RP16674/23, RP16674/24, RP129701/1	No
1/TOO/0003	24	Anzac Avenue	NEWTOWN	RP16933/17, RP16933/18, RP16933/19, RP16933/20	Yes
1/TOO/0002	64-72	Anzac Avenue	NEWTOWN	SP108206/150	No
1/TOO/0004	65	Anzac Avenue	NEWTOWN	RP16950/1, RP16950/2	No
1/TOO/0005	23A	Arthur Street	EAST TOOWOOMBA	RP51537/9	No
2/AUG/0003	2	Aubigny Crosshill Road	AUBIGNY	AG2983/271	No
2/GOO/0071	40-42	Barker Street	GOOMBUNGEE	G3601/702	No
2/GOO/0072	44	Barker Street	GOOMBUNGEE	G3601/703	No
2/YAR/0177	73	Barr-Smith Street	YARRAMAN	RP44866/7, RP44866/8	No

## SC6.7 PSP No. 7 – Neighbourhood Character Places

### SC6.7.0 Introduction

- (1) Short Title -The planning scheme policy may be cited as PSP No 7. – Neighbourhood Character Places.
- (2) Commencement - The planning scheme policy commences on 14 June 2013.

### SC6.7.0.0 Purpose of the Planning Scheme Policy

- (1) The purpose of the planning scheme policy is to identify Neighbourhood Character Places and Non-Neighbourhood Character Places referred to within the Toowoomba Regional Planning Scheme 2012.

### SC6.7.0.1 Authorised Legislation

- (1) This planning scheme policy is made under Chapter 3, Part 4, Division 2, and Chapter 3, Part 5 of the *Sustainable Planning Act 2009*.

### SC6.7.0.2 Relationship to the Planning Scheme

- (1) This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Toowoomba Regional Planning Scheme 2012.

### SC6.7.0.3 Definitions

Terms used in this planning scheme policy are defined in Schedule 1 - Definitions.

### SC6.7.0.4 Interpretation of the planning scheme policy

A term used in the planning scheme policy which is not defined in Schedule 1 - Definitions is to be interpreted in accordance with Part 1.3 of the Toowoomba Regional Planning Scheme 2012.

### SC6.7.1 List of Neighbourhood Character Places<sup>22, 23, 24</sup>

The following properties are Neighbourhood Character Places for the purposes of administering the Toowoomba Regional Planning Scheme 2012:

Street No	Street Name	Locality	Real Property Description
2	Aland Street	SOUTH TOOWOOMBA	AG1961/909
4	Aland Street	SOUTH TOOWOOMBA	RP16775/41

## SC6.8 PSP No. 8 – Street Trees

### SC6.8.0 Introduction

- (1) Short Title -The planning scheme policy may be cited as PSP No 8. – Street Trees.
- (2) Commencement - The planning scheme policy commences on 14 June 2013.

### SC6.8.0.0 Purpose of the Planning Scheme Policy

- (1) The purpose of the planning scheme policy is to provide standards in relation to:
  - (a) the planting of street trees; and
  - (b) the removal of street trees where associated with a development proposal.

### SC6.8.0.1 Authorised Legislation

- (1) This planning scheme policy is made under Chapter 3, Part 4, Division 2, and Chapter 3, Part 5 of the *Sustainable Planning Act 2009*.

### SC6.8.0.2 Relationship to the Planning Scheme

- (1) This planning scheme policy is to be read in conjunction with the assessment provisions specified in the Toowoomba Regional Planning Scheme 2012.

### SC6.8.0.3 Definitions

- (1) Terms used in this planning scheme policy are defined in Schedule 1 - Definitions.

### SC6.8.0.4 Interpretation of the planning scheme policy

- (1) A term used in the planning scheme policy which is not defined in Schedule 1 - Definitions is to be interpreted in accordance with Part 1.3 of the Toowoomba Regional Planning Scheme 2012.

### SC6.8.1 Trees and Services

- (1) When determining the location for planting of street trees the applicant must ensure the following:
  - (a) all underground services are located on site prior to excavation and relevant clearances maintained;
  - (b) the location of any future driveways, services or other construction works are identified; and
  - (c) sight lines to intersections are maintained in accordance with current guidelines.
- (2) Street trees and services are to be located generally in accordance with the following Figures 6.8.2:1 and 2.

Figure 6.8.2:1 – Absolute Minimum Footpath Width

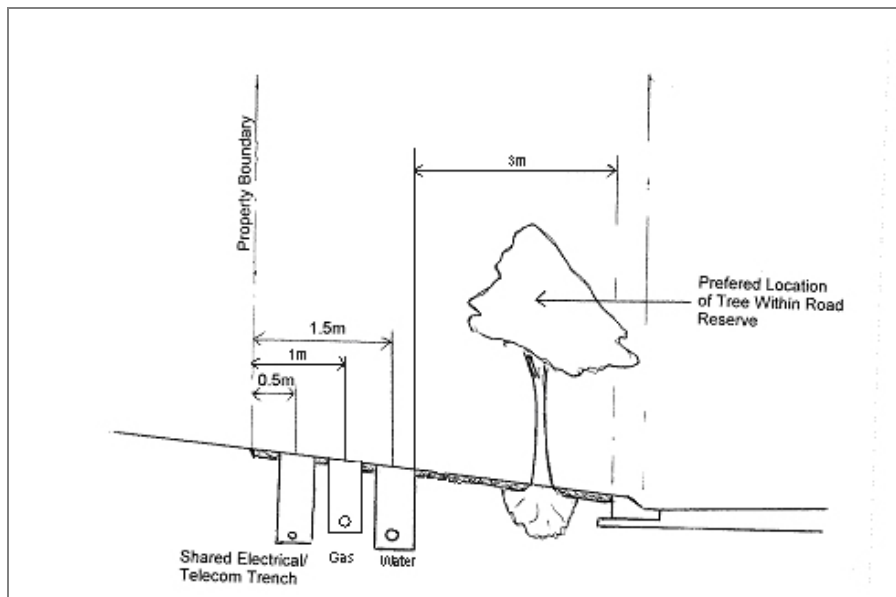

Figure 6.8.2:2 – Preferred Minimum Footpath Width

## SC6.8.2 Planting Procedures

### SC6.8.2.0 Standard planting procedures

- (1) Trees are to be supplied as semi-mature tree stock of minimum 1.2m height with a healthy branching crown appropriate to the species. Trees are to be supplied in containers appropriate to the size of the tree, generally 25 litre pot size, or as bare rooted stock if available. Locally grown stock is desirable where suitable quality and quantity are available.

- (2) The planting hole size is to be a minimum of twice the width and twice the depth of the rootball of the tree to be planted. The sides and base of the hole are to be broken up for a further 100mm. The hole is to be progressively backfilled with clean, friable soil and suitable slow-release fertiliser applied.
- (3) Grass and weeds are to be removed to a minimum area of 1m<sup>2</sup> around the tree, a shallow watering basin formed and organic mulch to a depth of 100mm spread in the basin.
- (4) Where the tree is planted into irrigated lawn, the watering basin is to be deleted and the area around the tree is to be mulched and finished with turf to match the lawn.
- (5) The tree is to be supported with two hardwood stakes tied at mid-height with hessian ties. The stake is to be clear of the rootball.
- (6) The tree is to be maintained, including being watered, pruned and weeded, for a minimum of 12 months.

Figure 6.8.3:1 – Standard Planting Detail

#### SC6.8.2.1 Planting in sealed footpaths/medians

- (1) An unsealed area of minimum 4m<sup>2</sup> area and minimum dimension of 2m is to be cut out and a hole excavated to a minimum depth of 1m. The hole is to be backfilled with clean friable soil mix and slow release fertiliser to 100mm below the surrounding edges. Gravel, mulch or other pervious material to a depth of 100mm is to be placed and finished flush with the surrounding surfaces. In high traffic areas, tree grates and guards may be installed. (Refer to Figure 6.8.3:2).

Figure 6.8.3:2 – Planting in footpath/median detail

#### SC6.8.2.2 Planting into carriageways

- (1) Planting areas are to be cut from the pavement and excavated to a minimum depth of 1.5m. Backfill is to be disposed of off site. A 150mm concrete kerb is to be constructed to the perimeter of the planting area ensuring a minimum area of 4m<sup>2</sup> is provided inside the kerb. Subsoil drainage, irrigation and root control barriers are to be installed at the discretion of the Manager of Council's Parks and Recreation Section. (Refer to Figure 6.8.3:3).

Figure 6.8.3:3 – Planting in Road Carriageway

### SC6.8.3 Street Tree Protection

#### SC6.8.3.0 Road and footpath reconstruction

- (1) Where development or road/footpath reconstructions affect existing street trees, the following specifications are to be followed:
  - (a) sealed Footpaths/Medians – a minimum 2m by 2m area around the base of the tree is to be left unsealed; and
  - (b) sealed Carriageways - as for (a) but with concrete kerb surround.

#### SC6.8.3.1 Root interference

- (1) 'Precautionary Area' means:
  - (a) the area within the dripline (branch spread); or
  - (b) the area determined by forming a circle (which has the tree as it's centre) with a radius of whichever of (i) or (ii) is the greater:
    - (i) half the tree height, or
    - (ii) four (4) times the circumference of that tree at 1.5m above ground level.
- (2) Where any earthworks or service work is to be done within the Precautionary Area of an existing tree, the specifications in Figure 6.8.4:1 are to be followed.

Figure 6.8.4:1 – Service Installation Near Existing Trees

### **SC6.8.3.2 Notice**

- (1) One week's notice is to be given to the Manager of Council's Parks and Recreation Section of any works affecting the 'Precautionary Area'.

### **SC6.8.3.3 Road Works**

- (1) All construction work within the 'Precautionary Area' is to have due regard to safety, engineering and horticultural requirements, and is to meet the following specifications:
  - (a) roots greater than 50mm diameter that need to be cut require the consultation of a tree specialist. If approval is given, the root must be cut cleanly with a sharp tool;
  - (b) no spoil or building materials are to be stored, or heavy machinery allowed to drive, within this area (except on existing hard surfaces); and
  - (c) damage to the tree's bark and branches by machinery is to be avoided.

### **SC6.8.4 Service Work/Trenching**

- (1) All trenching for the installation or maintenance of services is to meet the following specifications:
  - (a) trenching is to be by hand methods only within the Precautionary Area;
  - (b) roots greater than 50mm diameter that need to be cut require the consultation of a tree specialist. If approval is given, the root must be cut cleanly with a sharp tool;
  - (c) methods for boring (trenching techniques) will be used within the 'critical area', (refer Figure 6.8.4:1) if the service is located greater than 600mm below the surface level; and
  - (d) all trenches are to be backfilled with excavated soil or with a clean friable soil mix.

### **SC6.8.5 Street Tree Removal**

- (1) All operational works or development activities affecting or likely to affect the health and well being of street trees or necessitating their removal is to be conducted in consultation with the Manager of Council's Parks and Recreation Branch.
- (2) Any street tree removed is to be replaced by the person(s) who requested its removal in accordance with the requirements of the Manager of Council's Parks and Recreation Section.
- (3) The replacement tree(s) is to be:
  - (a) located as close as physically and practically possible to the location of the removed tree(s);
  - (b) of the same species as the species removed or, if appropriate, of the same species of nearby street trees; and
  - (c) compliant with section SC6.8.3 Planting Procedures.
